In Korea about 2000 species of mushrooms(higher fungi) have been studied from basidiomycetes to ascomycetes. Among them, about 1500 species are constructed in database. This database contains several items of mushrooms of Korea. The contents of items are taxonomical system, the application, the ecological resources, the geographical distributions and illustrated with photographs and spores. Also, information retrieval system is available by using KRISTAL II for query searches on the Web in URL <http://ruby.kisti.re.kr/~mushrooms>.

Keywords : Korea, msuhrooms, database,
