

DVB-MHP and OCAP | 2003-10-15

2003년 10월 15일 한국방송공학회 유주현
디지털방송기술워크샵 jhyu@alticast.com

Contents

→ **Status of Standard Specifications**

- MHP 1.0
- MHP 1.1
- OCAP 1.0
- OCAP 2.0

→ **OCAP 1.0 Differences from MHP 1.0**

Status of DVB-MHP 1.0.x Specification

→ **Defines two profiles:**

- Enhanced Broadcast Profile1 – one-way i-TV service
- Interactive Broadcast Profile1 – two-way i-TV service

→ **Version 1.0.2**

- The latest released version of MHP 1.0.x
- Conformance Test Suite has been made based on MHP 1.0.2

→ **Version 1.0.3**

- The draft version was released at July 2003
- No big changes from MHP 1.0.2

Status of DVB-MHP 1.1.x Specification

→ **Defines three profiles:**

- Enhanced Broadcast Profile2
- Interactive Broadcast Profile2
- Internet Access Profile2

→ **Backward Compatibility to 1.0.x is guaranteed.**

→ **Version 1.1**

- Released at Nov 2001
- Major New Features:
 - Stored Application Support, App Download via RC, Non-CA SmartCard Access, DVB-HTML(optional)

→ **Version 1.1.1**

- Released at June 2003

→ **No Test Suite, No Plan yet.**

Status of OCAP 1.0 Specification

- For OpenCable Host Device
- Based on MHP 1.0.2
- 90% APIs are shared with MHP 1.0.2
- Major Differences from MHP 1.0.2
 - Monitor App, Unbound App, POD, In-band PSIP, OOB SI
- Issued Version
 - Last updated at 2003-08-08
 - Still is changing
- No Test Suite yet

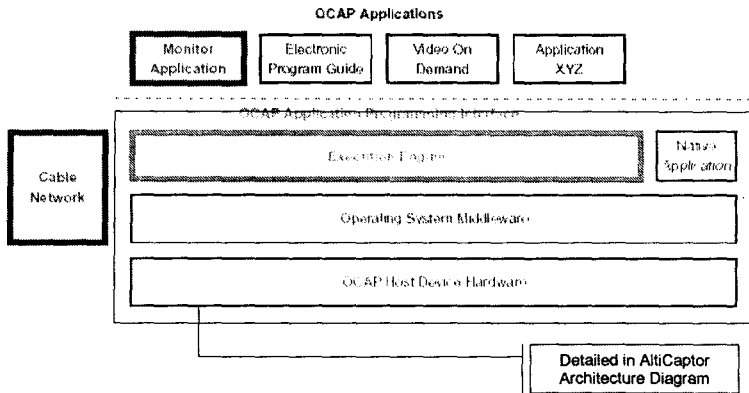

5

Status of OCAP 2.0 Specification

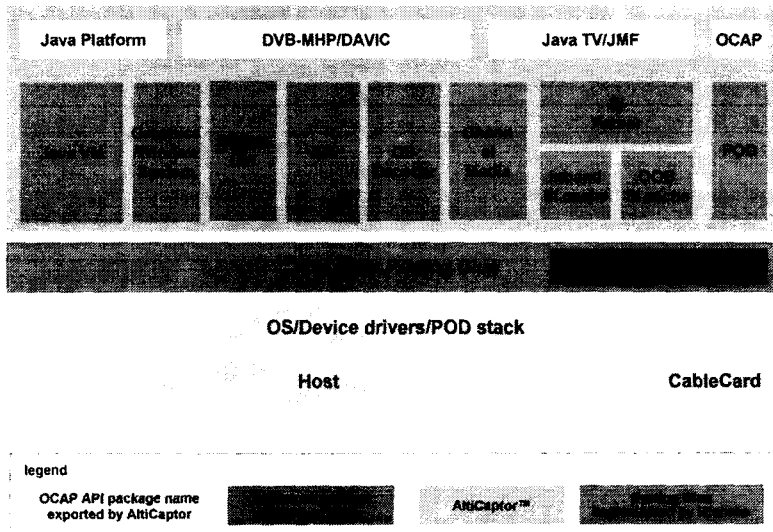

- For OpenCable Advanced Host Device
- Based on MHP 1.1
- Issued Version
 - Last updated at 2002-4-19
 - No maintenance yet
- No Test Suite yet
- Possibly will be merged into DCAP (DASE-OCAP harmonization)

6

OCAP 1.0 Software Architecture

AltCaptor™ OCAP Architecture

OCAP에 추가되는 API

→ 기존 MHP 1.0.2 API에 추가로 구현해야 하는 OCAP API

- org.ocap.OcapSystem.*
- org.ocap.application.*
- org.ocap.event.*
- org.ocap.hardware.*
- org.ocap.media.*
- org.ocap.mpeg.*
- org.ocap.net.OCRCInterface
- org.ocap.registry.*
- org.ocap.resource.*
- org.ocap.service.*
- org.ocap.system.*
- org.ocap.ui.event.*

9

OCAP에서 사용하지 않는 API

→ 기존 MHP 1.0.2 API에서 제거해야 하는 API

- org.davic.net.ca
- org.davic.net.tuning
- org.dvb.net.tuning
- org.dvb.si

10

Transport Protocol

- **CA**
 - descrambling 요청을 application이 하지 않음
 - CableCard가 transparent하게 처리
- **SI**
 - Without CableCard, Inband PSIP
 - With CableCard, OOB SI
- **Network dependent protocol for CATV**
- **VBI**
- **Interaction Channel : HDNI, CableCard**

Content Format

- **AudioClip**
 - MPEG1 audio layer 3 added
- **ClosedCaption**
 - controlled by JMF(javax.tv.media.protocol.PushSourceStream2)
- **I frame**
 - MPEG-1 I frame added (decoded by HW decoder)
- **640x480 square pixel OSD**

11

Application Model

- **Bound application**
 - broadcast MHP application
- **Unbound application**
 - Application signalled through XAIT
 - Application registered through Monitor Application
- **Native application**
 - device manufacturer application
- **Abstract Service**
 - Dynamically defined by Unbound applications
 - Statically defined by resident applications
- **Application Priority**
 - Monitor app
 - Unbound app
 - Bound app
- **Service Context**
 - A service context for each concurrent broadcast service
 - A service context for each abstract service
 - Context created by app

12

→ AIT Syntax

- Only application type
0x0001(OCAP-J) is valid

→ OOB

- XAIT files + XAIT descriptor
in S/L-VCT

→ AppDB

- bound apps + abstract
service apps

→ Terminal manufacturer app

- not removed

→ MSO app in XAIT

- install, remove and update
- controlled by AppVersion,
storage_priority in XAIT

→ MSO app registered by MonitorApp

- install, remove
- AppManagerProxy API with
storage_priority

→ Authentication at every launching time

→ 이상의 추가되는 **API**의 구현과 **OCAP**에서만 요구하는 기능을 위하여 다음과 같은 시스템 소프트웨어 모듈이 추가 개발되어야 한다.

→ **In-band PSIP** 및 **OOB SI** 처리 모듈

→ **Unbound Application** 시그널링 처리를 위한 **XAIT** 처리 모듈

→ **Unbound Application Lifecycle** 관리를 위한 **Application Manager** 모듈 확장

→ **POD, OOB RC, DOCSIS RC** 등을 위한 **Hardware** 인터페이스 모듈

→ **Closed-Caption Decoder**를 위한 인터페이스 모듈

Thank you

 **Malticast**
