

## Partial Tear of Upper Portion of the Subscapularis

조선대 병원 정형외과학교실

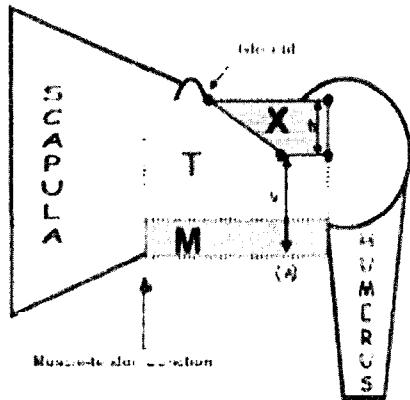

문영래

### Subscapularis

#### ■ Anatomy

- Origin: Anterior scapula medial 2/3
- Insertion: Lesser tuberosity.
- Tendinous portion: 2.5 cm length

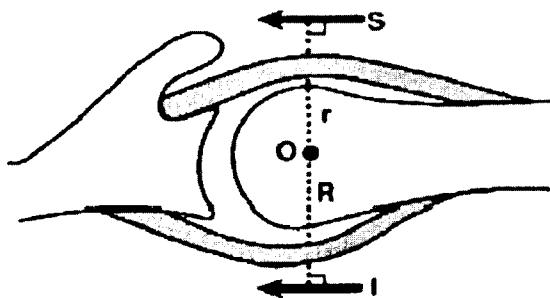

#### ■ Motion

- Internal rotator of glenohumeral joint<sup>1</sup>

#### ■ Function

- Prevent extreme external rotation, downward displacement of humeral head and joint compression

- Balancing transverse plane force couple<sup>2-9</sup>

## Subscapularis Tear

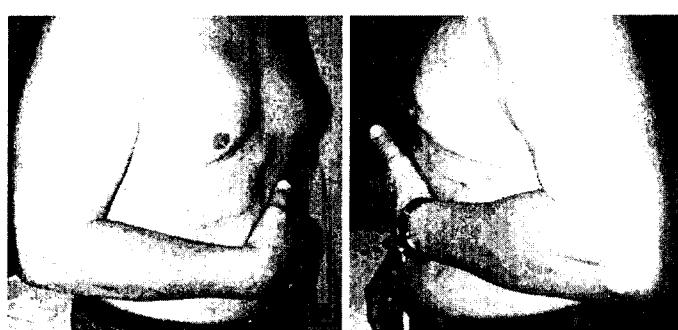

### Etiology

- History of Trauma
  - Majority
- Mechanism of injury
  - Arm in Abducted and Forced External Rotation
  - Repetitive microtrauma<sup>10</sup>
- Isolated Tear
  - Rare<sup>11-17</sup>

### Evaluation

- Pre-op Physical Signs (Napoleon , Lift-off)
- Pre-op X-ray & MRI
- Operative Findings
  - Pre-op Physical Signs
    - 1. Belly-Press test
    - 2. Napoleon sign
    - 3. Lift off test

1. Belly-press test

2. Napoleon sign

■ Variant of Belly-Press

■ Grade of Napoleon

A. Positive

B. Negative

C. Slight

3. Lift off test

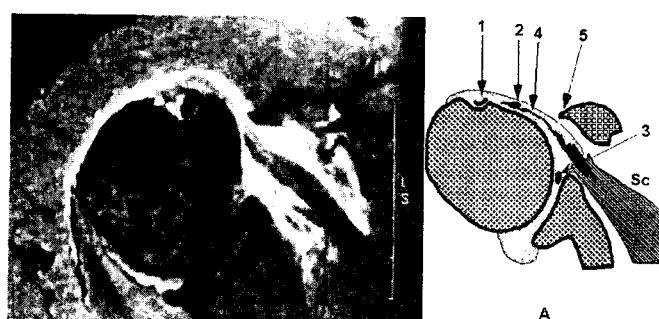

■ Pre-op X-ray

· True AP, Axillary lateral, scapular lateral views

-Anterior subluxation of the humeral head<sup>18</sup>

-Humeral Head Proximal Migration

■ MRI

- Most sensitive
- Detect
  - Amount of fatty infiltration and atrophy of subscapularis
  - Biceps tendon condition
- Misdiagnosis
  - Not uncommon<sup>19</sup>
- Gadolinium with MRI& MR arthrogram
  - Improve diagnostic accuracy<sup>20,21</sup>

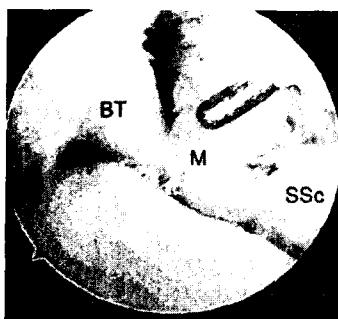

■ Arthroscopic Findings

■ Prominent coracoid – coracoid impingement

■ Associated Pathology

- Torn Biceps
- Dislocated Biceps
- SLAP
- Bankart and Hill-Sachs lesion

■ Treatment

1. Debridement
2. Side to side repair
3. Anchor repair
