

## TB Training in FuGong County of NuJiang

Huixin WU

School of Public Health, Kunming Medical College. Yunnan. P. R. China

### Abstract

Tuberculosis(TB) is a chronic and infectious disease, its incidence rate in Yunnan is 496.9/100,000, which is much higher than the average rate(366.9/100,000) in China. FuGong county of NuJiang was one of the most highest TB incidence rate in Yunnan. Traditional teaching methods are not very effective because village doctors in FuGong has low educational background.

**Objective:** To help village doctors in FuGong County understand more about TB knowledge and its treatment, and also to give us an opportunity to practice community health education(CHED) methods.

**Method:**

Using CHED teaching methods, including role plays, group discussions, songs and field practice.

**Conclusion** CHED is a very useful method for training village doctors in understanding and treating TB.
