Nortropane Alkaloids have received a great deal of attention because of their remarkable pharmaceutical significance. And Monosaccharide and disaccharide derivatives have received low side effect and anti virus agent in living body.

Nortropinone derivatives was obtained by treatment of Aromatic diamine, 2,5-dimethoxytetrahydrofuran, and 1,3-diacetonedicarboxylic acid. And saccharide derivatives was obtained by treatment of saccharide(mannose) and corresponding amines in anhydrous methanol.

Then we synthesized various nortropinone and saccharide derivatives. Also we are studying for nortropinone derivative with saccharide group.
