

SOFT BASE DENTURE 제작에 관한 연구

원광보건대학 치기공과

=Abstract=

A Study on the Processing of Soft Base Denture

Moo-Hak Shin

Dept. of Dental Laboratory Technology, Won Kwang Science College

A detailed description of the Laboratory Processing procedures for Soft Base Denture that varies from those offered by the manufacturer has provided to be effective.

As follows ;

1. Promotion of patient's comfortability
2. increase in denture retention
3. because of the same heat-curing denture materials used improves bonding & endurance
4. often used denture refitting
5. reducing the rate of alveolar absorption

The processing for soft base denture is very sensitive, consequently.
