## A STUDY FOR THE DEVELOPMENT OF KOREAN CHILD REARING INVENTORY FOR SOCIAL PHOBIA

**Myo-Yeon Huh, Kang-Seob Oh, M.D., Si-Hyung Lee, M.D.**

*Department of Psychiatry, Kangbuk Samsung Hospital, Seoul*

The purpose of this study was to develop a Korean Child Rearing Attitudes Inventory ; in order to understand the effects of parents rearing attitudes on social phobia. The total subjects were 392 high school students in Seoul. The scales were administered to the subjects and we examined the reliability and validity. The results were as follows. According to the factor analysis, six factors abstracted from the father's rearing attitudes : rejection, high expectation, anxious, control, emotional care and overconcern of other's opinion. By the method of reliability analysis and factor analysis, finally selected items were 60. The reliability of the factors ranged from .76 to .90 by Cronbach . Five factors abstracted from the mother's rearing attitudes : anxious, high expectation, rejection, emotional care and overconcern of other's opinion. And total selected items of mother's rearing attitudes were 61. The reliability of the factors ranged from .72 to .91 by Cronbach . The construct validity and reliability of this inventory were supported.

**KEY WORDS** : Child rearing attitude · Social phobia · Inventory.
