ABSTRACT

The spider fauna of DMZ (Demilitarized Zone) of Chulwon in Kangwon-do, Korea was investigated. As a result, the authors present a list of 54 species of 54 genera in 14 families (2 unidentified species newly known to Korea; *Evarch* sp (C.), *Helicius* sp. (A)) and revise *Asianellus festivus* of the unrecorded genus to be transferred from the genus *Phlegra* from Korea.

Key words : Spider fauna, *Evarch* sp (C.), *Helicius* sp. (A), Unrecorded genus, DMZ, Korea.

INTRODUCTION

After Namkung & Yoon (1975) investigating the spider fauna of Mt. Gamak, Paju-gun, near DMZ, only Namkung et al., (1988) were reported the spider fauna only in eastern DMZ, Kwangwon-do. The present study was carried out to clarify the additional spider fauna of western DMZ, Kangwon-do, Korea. The spiders collected by hand sorting, sweeping, beating and pitfall-trap in DMZ, Kangwon-do, from Oct. 3 to Oct. 5, 1997 were preserved in 80% ethylalcohol and observed under stereoscopic microscope (SZH 10, 140X) in steeping condition. Changes of the scientific names and identification used in this paper were performed according to Kim (1998) and Platnick (1997), and all the descriptions of the genus *Asianellus* were described by the method of Proszynski (1998). All specimens were deposited in the Arachnological Institute of Korea. The abbreviations used in this paper are as follows:

C., China; J., Japan; T., Taiwan; Ts., Tsushima Island; Cos., Cosmopolitan; Hol., Holarctic region; Or., Oriental region; Pal., Palaearctic region

MEASUREMENT (mm.)

Female: body length, 9.27; carapace length/width, 3.75/2.78; abdomen length/width, 5.31/4.54; sternum length/width, 1.48/0.89; cheliceral length/width, 1.11/0.74; labium length/width, 0.49/0.45; endite length/width, 0.82/0.49; length of 1st eye row, 2.00; length of 2nd eye row, 2.00; length of 3rd eye row, 2.00; height of ocular quadrangle, 1.51.

Leg I 5.28 (1.76, 1.02, 1.02, 0.67, 0.82), II 5.56 (1.88, 1.06, 1.06, 0.75, 0.86), III 8.08 (2.67, 1.45, 1.37, 1.61, 1.06), IV 8.23 (2.55, 1.18, 1.76, 1.88, 1.06); palp 2.86 (0.94, 0.59, 0.47, 0.86).

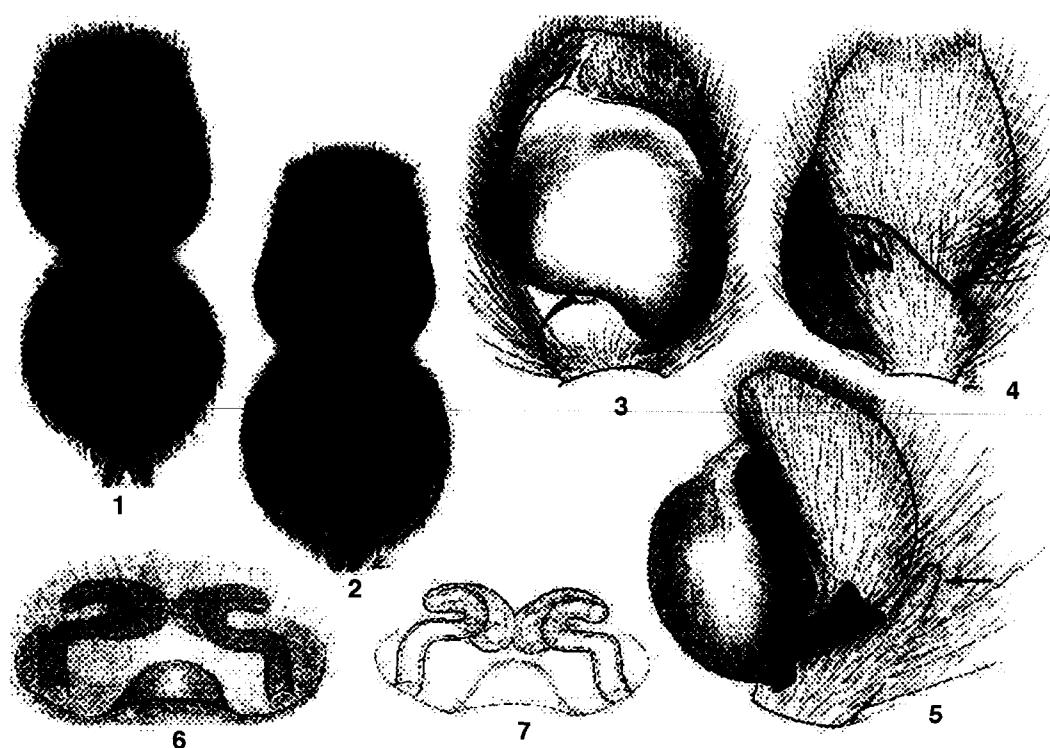

Male: body length, 6.59; carapace length/width, 3.37/2.43; abdomen length/width, 3.06/2.39; sternum length/width, 1.31/0.82; cheliceral length/width, 0.94/0.59; labium length/width, 0.35/0.40; endite length/width, 0.72/0.45; length of 1st eye row, 1.76; length of 2nd eye row, 1.76; length of 3rd eye row, 1.80; height of ocular quadrangle, 1.37.

Leg I 5.15 (1.61, 1.06, 0.91, 0.74, 0.87), II 5.09 (1.68, 1.04, 0.87, 0.77, 0.89), III 7.01 (2.22, 1.16, 1.33, 1.48, 1.04), IV 7.10 (2.17, 1.01, 1.33, 1.70, 1.01); palp 2.84 (0.94, 0.42, 0.59).

Description

♀: Caprapace index is 74, longer than width. Eye areas and thoracic margin darkish, the rest part brownish. Clypeus height two third of the diameter of anterior median eyes. Posterior median eyes. Posterior eyes set precisely half-way along carapace. Ocular quadrangle broader than long, equal behind to in front. Endites and labiums with thin brown except edge part brwnish white. Endite index 60, and labium index 92.

Chelicera brown armed with 1 retromarginal and 2 promar-

**Figs. 1-7.** *Asianellus festivus* (C. L. Koch, 1834).

Total 14 Families, 54 Genera, 70 Species							

ginal teeth. Sternum oval, light yellowish brown, and its margin no project the margin of 4th legs.

Leg formula 4 · 3 · 2 · 1. Leg formular index, 100: 105: 153: 156.

The abdominal dorsum pale yellow with 4 black bands and complex patterns.

Epigynum and genitalia as illustrated in the figures 6-7.

♂: General aspects and coloration essentially similar to female. Carapace dark and both thoracic sides with white hair.

Ocular quadrangle smaller than length behind and in front (0.41; 0.98; 0.78). Labium index 114, endite index 63. Chelicera armed with 1 retromarginal and 2 promarginal teeth and index 63.

Leg formula 4 = 3, 2 = 1, formular index, 100: 99: 136: 138. Leg/c 1.53, fem. I/c 0.48, fem. I l/d 2.18.

The abdominal venter yellowish brown and dorsum dark with faint yellowish brown chevrons posteriorly.

Palpal organ as illustrated in the figures 3-5.

적 요

강원도 철원일대 비무장지대의 거미상을 조사한 결과 14과, 54속, 70종이었다. 이중 처음으로 한국에서 발견된 2 미동정종, *Evarch* sp (C), *Helicius* sp. (A)과 屬을 전환시킨 *Asianellus festivus*를 재기재한다.

검색어: 비무장지대, 거미상, *Evarch* sp (C), *Helicius* sp. (A), 미기록속, 한국.
