#### Abstract

Condensation of 4-cyano-5.6-dimethyl-3-py ridazinone 1 with aromatic aldehydes gave the novel styryl derivatives $\mathbf{2 a - c}$. Refluxing of compound $\mathbf{2 a}$ with phosphons oxychloride furnished 3-chloropyridazine derivative 3 . Compound 3 was reacted with thiourea and produced pyridazine- $3(2 H)$ thione 4 . Thieno[2.3-c]py ridazines 5 a-e were achieved by cycloalkylation of compound 4 with halocompounds in methanol under reflux and in the presence of sodium methoxide. Also. refluxing of compound 4 with F -substituted chloroacetamide in the presence of potassium carbonate afforded thienopyridazines 6ae. Cyclization of compound 6 with some electrophilic reagents as carbon disulfide and triethyl orthoformate furnished the novel py rimido[ $\left.4^{\prime} .5^{\prime}: 4.5\right]$ thieno[ 2.3 -c]pyridazines 12 and $13 a-c$. respectively. Diazotisation of compound 6 with sodium nitrite in acetic acid produced the pyridazino[4'.3'.4.5]thieno[3.2-d][1.2.3]triazines 14a-c. Ternary condensation of compound $\mathbf{1}$. aromatic aldehydes and malononitrile in ethanol containing piperidine under reflux afforded the novel phthalazines 16a-c. Compound $\mathbf{3}$ was subjected to some nucleophilic substitution reactions with amines and sodium azide and formed the aminopyridazines $\mathbf{1 7 a} \mathbf{a}$ b and tetrazolo[1.5-b]py ridazine 19. respectively. The stnictures of the sy nthesized compounds were established by elemental and spectral analyses.

Key Words : Pyridazine. Thieno[2.3-c]pyridazine phthalazine and condensed pyridazines

## Introduction

A considerable number of pyridazine derivatives were found to have antibacterial. ${ }^{1}$ analgesic, ${ }^{3}$ antiinflanumatory. ${ }^{3}$ anticonvulsant, ${ }^{4}$ acetyl-cholinesterase inhibitors, ${ }^{5}$ aldose reductase inhibitor and antioxidant ${ }^{6}$ properties. Some thienopyridazines have been reported to possess considerable antiasthmatic ${ }^{7}$ and fibrinolytic ${ }^{8}$ activities. In addition, 1.2,3triazine systems condensed with carbocycles or heterocycles are known to exhibit antiallergic activity ${ }^{\text {P }}$ On the basis of these reports and in continuation in the synthesis of novel condensed pyridazine derivatives, ${ }^{101 / 4}$ we reported here the synthesis of 5 -aminothieno[2,3-c]pyridazine. pyrimido [4'.5': 4,5]thieno[2,3-c]pyridazine, pyridazino $\left[4^{\prime}, 55^{\prime}: 4,5\right]$ thieno $[3,2-\mathrm{d}]$ [1.2.3]triazine and phthalazine from t-cyano-3-mercapto-6-methyl-5-styryl-pyridazine 4 as starting material.

## Results and Discussion

The starting material 4 -cyano- 5 ,6-dimethyl-3-pyridazinone 1 was readily obtained by treatment of diacetyl with hydrazine hydrate followed by cyclocondensation with ethyl cyanoacetate in the presence of sodium ethoxide. ${ }^{15}$ Styryl derivatives 2a-c were achieved by refluxing of pyridazinone 1 with aromatic aldehydes in ethanol and in the presence of piperidine. When compound $\mathbf{2 a}$ was refluxed with phosphorus
oxychloride gave the 3 -chloropyridazine derivative $\mathbf{3}$ in $87 \%$ yield. Compound 3 was subjected to addition-elimination reaction with thiourea ${ }^{16}$ in ethanol under reflux to afford 4 -cyano-6-methyl-5-styryl-pyridazine- $3(2 \mathrm{H}$ )thione 4 (Scheme 1). The structure of compound 4 was established by another

Scheme 1
synthetic route via thionation of compound $\mathbf{2 a}$ with phosphorus pentasulfide under reflux in pyridine.

Cycloalkylation of compound 4 with chloroacetonitrile in the presence of an equimolar amount of sodium methoxide in methanol afforded 5-amino-3-methyl-4-styryl-thieno[2.3-c]-pyridazine-6-carbonitrile 5a in high yield (Scheme 2). The structure of compound $\mathbf{5 a}$ was established using microanalyses and spectroscopic data. The infrared spectrum of 5 a exhibited strong absorption at $2200 \mathrm{~cm}^{-1}$ due to the carbonitrile group in addition to amino functional group at 3450 and $3320 \mathrm{~cm}^{-1}$. ${ }^{1} \mathrm{HNMR}$ spectrum of 5 a in DMSO-d $\mathrm{d}_{6}$ displayed a broad singlet because of amino protons at $\delta 6.10-6.20$. singlet at $\delta$ 2.80 due to methyl protons and a multiplet at $\delta 6.60-7.42$ which was assigned to aromatic and ethylene protons. In addition. the structure of compound $\mathbf{5 a}$ was confirmed by its mass spectrum which showed a molecular ion peak at $\mathrm{m} / \mathrm{z}$ 292 which is the base peak in the spectrum. In a similar manner when compound 4 was cyclocondensed with chloroacetone. ethyl chloroacetate and phenacyl bromide derivatives yielded the corresponding thienopyridazines 5b, 5c. 5d and 5e, respectively' (Scheme 2). Cyclocondensation of compound 4 with $N$-substituted chloroacetamide in the presence of anhydrous potassium carbonate to form the novel carboxamide derivatives 6a-e (Scheme 2). The infrared spectra of compounds 6a-e showed the absence of nitrile functional group and the presence of $\mathrm{NH} / \mathrm{NH}_{2}$ as well as carbonyl groups. ${ }^{1} \mathrm{HNMR}$ spectrum of compound 6e in DMSO-d ${ }_{6}$ displayed the presence of acetyl. methyl amino aromatic. ethylene and NH protons. In the mass spectrum of compound 6c a molecular ion peak was observed at $\mathrm{m} / \mathrm{z} 416$ which is the base peak in the spectrum.

Ethoxymethyleneamino derivative 7 was obtained by treatment of enaminonitrile 5 a with triethyl orthoformate in the presence of acetic anhydride. When compound 7 was allowed to react with hydrazine hydrate in benzene at room temperature the starting material 5 a was produced (mp.

Scheme 3
nmp and TLC). The condensed pyrimidine 8 was ruled out on the basis of analytical and spectral data. The formation of compound 5 a from 7 was assumed to proceed via the addition of hydrazine at the imino functional group to form intermediate 9 followed by elimination of ethyl formate hydrazone ${ }^{17}$ (Scheme 3).

Refluxing of compound 5 a with carbon disulfide ${ }^{18}$ in pyridine afforded the corresponding pyrimido $\left[4^{\prime} .5^{\prime}: 4.5\right]$ -thieno[2.3-c]pyridazine derivative 10 . The infrared spectrum of compound $\mathbf{1 0}$ was free of nitrile functional group and displayed the presence of two NH functional groups at 3460 and $3320 \mathrm{~cm}^{-1}$. Compound 10 was subjected to react with two molecules of ethyl chloroacetate under reflux in the presence of fused sodium acetate and furnished the di(ethoxycarbonylthio) derivative 11. Reaction of compound 6 c with carbon disulfide in pyridine gave the condensed pyrimidinethione derivative 12. Cyclization of compounds 6 a-c with triethyl orthoformate in the presence of catalytic amounts of glacial acetic acid produced the pyrimidothienopyridazine derivatives 13a-c. Pyridazino[4'.3'4.5]thieno[3.2-d][1.2.3]triazine derivatives $\mathbf{1 + a}-\mathrm{c}$ were obtained by diazotisation of compounds $\mathbf{6 c}-\mathrm{e}$ with sodium nitrite in glacial acetic acid at $0^{\circ} \mathrm{C}$ (Scheme 4).
Ternary condensation of aromatic aldehyde malononitrile and methyl carbonitrile 1 in the presence of a catalytic amount of piperidine afforded the novel derivatives of phthalazine $16 \mathrm{a}-\mathrm{c}$ in good yields (Scheme 5). Analytical and spectral data were consistent with this structure. The infrared spectra of compounds $\mathbf{1 6 a - c}$ revealed the presence of amino. cyano and carbonyl functional groups whereas ${ }^{1} \mathrm{H}$ NMR spectrum of compound $\mathbf{1 6 a}$ in DMSO-d displayed the presence of signal at $\delta 2.4\left(\mathrm{~s} .3 \mathrm{H} . \mathrm{CH}_{3}\right)$ in addition to amino and aromatic protons. A reaction mechanism ${ }^{19}$ proposed for the formation of the phthalazines $16 \mathrm{a}-\mathrm{c}$ is illustrated in Scheme (5). The structure of phthalazine derivatives 16a-c were confirmed by another synthetic route wia refluxing of compound $\mathbf{1}$ with aromatic aldehydes in ethanol containing

## Scheme 4

piperidine to afford styryl derivatives 2a-c which upon treatment with malononitrile in the presence of piperidine yielded the corresponding phthalazines 16a-c (Scheme 5). Also. on refluxing compound 1 with arylidenemalononitriles $\mathbf{1 5}$ in ethanol in the presence of piperidine, the phthalazines 16a-c were obtained.
This contribution was extended to study some nucleophilic substitution reactions with chloropyridazine 3 . Thus compound 3 was reacted with piperidine and aniline in benzene under reflux to yield the novel aminopyridazine derivatives 17 a and $\mathbf{1 7 b}$. respectively. Sodium azide as nucleophile was reacted with chloropyridazine 3 in dimethylsulfoxide at 90 ${ }^{\circ} \mathrm{C}$ to form the novel tetrazolo[1.5-b]-pyridazine 19 . The azidopyridazine 18 was excluded on the basis of infrared spectrum which showed the absence of azide functional group. Treatment of compound 3 with triphenylphosphine under reflux to produce the (triphenylphosphoranilidene)amino derivative 20 . The formation of $\mathbf{2 0}$ was assumed to proceed through triphenylphosphine attack the tetrazole moiety followed by elimination of nitrogen molecule ${ }^{-0}$ (Scheme 6).

## Experimental Section

Melting points were determined on a Fisher-John melting points apparatus and are uncorrected. IR spectra were recorded on a Shimadzu 470 spectrophotometer using KBr pellets. ${ }^{1} \mathrm{H}-\mathrm{NMR}$ spectra were measured on a Varian $390-90$ MHz NMR spectrometer using TMS as internal standard. Elemental analyses were performed on a Perkin-Elmer 240 C microanalyzer. The mass spectra were recorded on Jeol-JMS-600 apparatus. The physical and spectral data are shown in Tables 1 and 2 . respectively.
4-Cyano-6-methyl-5-styryl-3-pyridazinone derivatives ( $\mathbf{2 a}-\mathrm{c}$ ). To a solution of compound $\mathbf{1}(0.01 \mathrm{~mole}$ ) in 50 mL of absolute ethanol. aromatic aldehyde ( 0.01 mole) and catalytic amount of piperidine were added. The reaction mixture was heated for 4 h . then poured into ice water $/ \mathrm{HCl}$ mixture. The solid product was collected by filtration and recrystallized from the proper solvent to give $\mathbf{2 a}$-c
3-Chloro-4-cyano-6-methyl-5-styrylpyridazine (3). Compound 2 a ( 0.01 mole ) was refluxed with phosphorus oxychloride ( 15 mL ) for 3 h . The cooled reaction mixture was slowly added into the crushed ice water. The resulting solid was filtered. dried and recrystallized from the proper solvent to give 3 .
4-Cyano-3-mercapto-6-methyl-5-styrylpyridazine (4).
Method A: A mixture of compound 3 ( 0.01 mole ) and thiourea ( 0.012 mole ) in dry ethanol ( 50 mL ) was heated under reflux for 3 h . The obtained solid product was recrystallized from the proper solvent to give 4 .
Method B: A mixture of compound 2a (0.01 mole) and phosphorus pentasulfide ( 0.012 mole ) in pyridine ( 15 mL ) was refluxed for 2 hr . then allowed to cool and poured into cold water ( 100 mL ). The solid product was collected and recrystallized to give 4
5-Amino-3-methyl-4-styryl-6-substituted-thieno [2,3-c]pyridazine derivatives (5a-e): General procedure. A mixture of compound 4 ( 0.01 mole), sodium methoxide ( 0.01 mole ) and halocompound ( 0.01 mole ) in 50 mL methanol was refluxed for 2 h . The separated product was collected on cooling and recrystallized from the proper solvent to give 5 .
5-Amino-3-methyl-t-styryl-6-(substituted carbamoyl)-thieno[2,3-c]-pyridazine derivatives (6a-e): General procedure. A mixture of compound + ( 0.01 mole ). appropriate $N$-substituted chloroacetamide ( 0.01 mole ) and anhydrous potassium carbonate ( 2 g ) in absolute ethanol (40 mL ) was heated under reflux for 2 h . then allowed to cool. The solid product was collected, washed with water and recrystallized from the proper solvent to give 6 . MS (6a): $310\left(\mathrm{M}^{+}: 2.1 \%\right) .312$ (M+2: $0.4 \%$ ). 308 (28\%). 291 ( $61 \%$ ). 264 (base peak: $100 \%$ ). $215(39 \%) .187(7.9 \%) .164(2.1 \%)$. 115 (1.4\%) and 76 (1.1\%).
5-Ethoxymethyleneamino-3-methyl-t-styryl-thieno[2,3c]-pyridazin-6-carbonitrile (7). A mixture of compound $\mathbf{5 a}$ ( 0.01 mole), triethyl orthoformate ( 3 mL ) and acetic anhydride ( 10 mL ) was heated under reflux for 4 h . then allowed to cool. The product was collected and recrystallized from the
proper solvent to give 7
Formation of 3-methyl-4-styryl-5,6,7,8-tetrahydro-6,8-dithioso-pyrimido $\left[4^{\prime}, \mathbf{5}^{\prime}: 4,5\right]$ thieno[ 2,3 -c]pyridazine (10) and 3-methyl-4-styryl-7-(4-methoxyphenyl)-5,6,7,8-tetra-hydro-6-thioxopyrimido [4',5':4,5]thieno[2,3-c]pyridazine (12). A mixture of compound 5 a or $6 \mathrm{c}(0.01 \mathrm{~mole})$ and carbon disulfide ( 10 mL ) in dry pyridine ( 20 mL ) was heated on a water bath for 10 h . The solid product was precipitated on cooling. then collected and recrystallized from the proper solvent to give $\mathbf{1 0}$ and $\mathbf{1 2}$ respectively.

3-Methyl-4-styryl-6,8-di(ethoxycarbonylmethylthio)-pyrimido-[ $\left.4^{\prime}, 5^{\prime}: 4,5\right]$ thieno $[2,3-\mathrm{c}]$ pyridazine (11). A mixture of compound 10 ( 0.01 mole). ethyl chloroacetate ( 0.01 mole) and sodium acetate ( 2 g ) in ethanol ( 30 mL ) was refluxed for 1 h , then allowed to cool. The solid product was collected and recrystallized from the proper solvent to give 11.

3-Methyl-4-styryl-7-(4-substituted phenyl)-7,8-dihydro-8-oxopyrimido $\left[4^{\prime}, 5^{\prime}: 4,5\right]$ thieno $[2,3$-c]pyridazine derivatives ( $13 \mathrm{a}-\mathrm{c}$ ): General procedure. To a mixture of compound 6 ( 0.01 mole) and triethyl orthoformate ( 5 mL ). drops of acetic acid was added. The reaction mixture was heated under reflux for 1 h . The solid product was collected and recrystallized from the proper solvent to give 13. MS (13a): $320\left(\mathrm{M}^{-}\right.$: base peak). $322(\mathrm{M}+2: 6.7 \%) .291$ ( $9.8 \%$ ). 265 ( $1.3 \%$ ). 242 ( $40 \%$ ). 219 ( $1.5 \%$ ) and 187 (1\%). MS (13b): $426\left(\mathrm{M}^{+}\right.$: base peak), $396(4 \%), 348(17 \%), 291(1.4 \%), 215$ (7.9\%) and $77(0.22 \%)$.

3-Methyl-4-styryl-7-(4-substituted phenyl)-7,8-dihydro-8-oxopyridaz-ino $\left[4^{\prime}, 33^{\prime}: 4,5\right]$ thieno $[3,2-\mathrm{d}][1,2,3]$ triazine ( 14 ac): General procedure. To a compound 6 ( 0.01 mole ) dissolved in acetic acid ( 20 mL ), sodium nitrite solution ( 0.5 g in $2 \mathrm{~mL} \mathrm{H}_{2} \mathrm{O}$ ) was added drop by drop with stirring during 15 minutes. After the addition was finished. stirring was continued for additional one hour and then allowed to stand for 5 hours. The solid product was collected and recrystallized from the proper solvent to give 14 .

5-Amino-1-methyl-4-0x0-7-aryl-3,4-dihydrophthalazin-6-carbonitriles ( $16 \mathrm{a}-\mathrm{c}$ ): General procedure.

Method (A): A misture of compound 1 ( 0.01 mole ). aromatic aldehyde ( 0.01 mole ) and malononitrile ( 0.01 mole) in ethanol ( 50 mL ) in the presence of piperidine ( 0.5 mLL ) was heated under reflux for 4 h . then poured into ice/ HCl mixture. The solid product was collected and recrystallized from the proper solvent to give 16.
Method (B): To a solution of 4 -styryl derivative 2 ( 0.01 mole) in 50 mL ethanol. malononitrile ( 0.01 mole ) and catalytic amount of piperidine were added. The reaction mixture was heated under reflux for 4 h . then poured into ice/ HCl mixture. The solid product was collected and recrystallized from the proper solvent to give 16.

Method (C): To a solution of compound 1 (0.01 mole) in 50 mL of ethanol. benzy lidenemalononitrile $\mathbf{1 5}$ ( 0.01 mole ) and catalytic amount of piperidine were added. The reaction mixture was heated under reflux for 4 h , then poured into ice $/ \mathrm{HCl}$ mixture. The solid product was collected and recrystallized from the proper solvnet to give 16.

4-Cyano-3-substituted amino-6-methyl-t-styryl-pyridazine derivatives ( $17 \mathrm{a}, \mathrm{b}$ ): General procedure
A mixture of compound $\mathbf{3}$ ( 0.01 mole) and amino compound ( 0.012 mole ) in dry benzene ( 30 mL ) was heated under reflux for 0.5 h . The solid product was collected and
recrystallized from the proper solvent to give 17.
6-Methyl-7-styryl-tetrazolo[1,5-b]pyridazin-8-carbonitrile (19). A mixture of compound 3 ( 0.01 mole ) and sodium azide ( 0.01 mole) in dimethylsulfoxide ( 10 mL ) was heated under reflux for 1 h . then poured into ice water. The
solid product was collected and recrystallized from the proper solvent to give 19 .
4-Cyano-6-methyl-5-styryl-3-[(triphenylphosphoranili-den)-aminolpyridazine (20). A mixture of compound 19 ( 0.01 mole) and triphenylphosphine ( 0.01 mole ) in dry benzene ( 50 mL ) was heated under reflux for 1 h . After cooling, the precipitate product was obtained then filtered off and recrystallized from the proper solvent to give $\mathbf{2 0}$.
