

# Flora of Mt. Woosanbong, Korea

**Shin-Ho Kang, Young-Sim Lee and Sung-Chul Ko\***

Department of Biology, College of Science, Han Nam University, Daejeon 306-791, Korea

## ABSTRACT

This study was performed to investigate the flora and plant resources of Mt. Woosanbong (537.8 m) from April to October 2002. The collected vascular plants were composed of all 389 taxa including cultivated species, and classified into 329 species, 2 subspecies, 53 varieties, and 5 forms of 248 genera under 81 families. Six taxa of the Korean endemic plants and 4 taxa of the rare and endangered plants were also distributed in this mount. Resource plants were categorized into edible 181, pasturing 160, medicinal 136, stainable 94, ornamental 77, timber 22, fiber 5 and industrial 4 taxa, respectively. Floristic geography of the investigated area was regarded as the boundary between middle and southern parts in floristic pattern of the Korean Peninsula.

**Key words:** flora, resource plants, Mt. Woosanbong.

## INTRODUCTION

Mt. Woosanbong (537.8 m, Lat. 36°21'64"-36°25'00"N, Long. 127°15'46"-127°17'30"E) is located at the boundary between Yuseong District of Daejeon City and Gongju City of Chung-nam Province. For recent five years, the yearly average temperature of this mount area was 12.9°C, 34.4°C as maximum and -13.7°C as minimum, and average of annual precipitation was 1,655.6 mm (Daejeon City, 2001). Till now, floras of mounts neighbouring to Daejeon City such as Mt. Whan (Ko *et al.*, 1989a), Mt. Do Duk Bong (Ko *et al.*, 1989b), Mt. Bo Moon (Kim *et al.*, 1995), Mt. Kyeryong (Lee *et al.*, 1995; Ko and Kang, 2001), and Mt. Keumsoobong (Ko and Kang, 2001) have been investigated by authors, but the flora of this mount has not been examined yet.

On the other hand, natural resources have been continuously reduced by urbanization and population increase, and so it is important that research for the protection and conservation of natural resources must be done. To set bounds for useful resources is very difficult, even though plant uses are enormous. Hence, it is imperative to explore plants utilization as a resource.

The purpose of this study was to examine and present the composition of resources vascular plants, and to provide information for conservation and preservation of resource plants in Mt. Woosanbong.

## MATERIALS AND METHODS

Korean endemic and cultivated plants were respectively marked as \* and \*\* in front of their

---

Corresponding author : Sung-Chul Ko, (E-mail)kscaaa@mail.hannam.ac.kr

scientific names. The investigation was conducted in each slope and altitude of the mount. The classification scheme and scientific names were based on Lee (1980). Categories for usable plants, that is, edible, pasturing, medicinal, stainable, ornamental, timber, fiber and industrial plants depended on Chung (1955, 1956), Lee (1980) and Lee (1996). In addition, the endemic plants (Lee, 1984; Paik, 1994), and the rare and endangered plants (KACN, 1981; Ministry of Environment, 1994) were also examined.

## RESULTS AND DISCUSSION

### Composition of vascular plant

Vascular plants were classified into 329 species, 2 subspecies, 53 varieties, and 5 forms of 248 genera under 81 families (Table 1, Appendix). This resulted in 9.3% of total Korean vascular plants, 4,191 taxa of Nakai (1952). The flora of Mt Woosanbong consists of 8 taxa of pterophyte, 9 taxa of gymnosperm and 373 taxa of angiosperm (Table 2).

### Composition of usable plants

Grouped into their utilities, resource plants were

categorized into 181 (46.3%) taxa for edible, 160 (40.9%) taxa for pasturing, 136 taxa (34.8%) for medicinal, 94 taxa (24.0%) for stainable, 77 taxa (19.7%) for ornamental, 22 taxa (5.6%) for timber, 5 taxa (1.3%) for fiber and 4 taxa (1.0%) for industrial plants. But the resources values for 35 taxa (9.0%) have not been known yet.

### Floristic geography of Mt. Woosanbong

Floristic geography of the Korean Peninsula belongs to Sino-Japanese Region of Boreal or Holarctic Kingdom (Good, 1947). Mt. Woosanbong located at the boundary between middle and southern parts in floristic pattern of the Korean Peninsula (Nakai, 1935). Lim (1987) suggested that this investigated area belongs to temperate middle part in the Korean Peninsula. Plants which grow in southern, middle, and northern parts of the Korean Peninsula, and also in this mount are as follows:

Plants of northern part pattern: 2 taxa of *Acer truncatum*, and *Artemisia lavandulaefolia*.

Plants of middle part pattern: 8 taxa of *Avena fatua*, *Allium thunbergii*, *Magnolia obovata*, *Liliodendron tulipifera*, *Geum japonicum*, *Prunus serrulata* var.

Table 1. The abridged list of the plants in Mt. Woosanbong.

Taxa	Family	Genus	Species	Var.	For.	Subsp.	Total
Pterophyte	4	7	8				8
Gymnosperm	5	7	9				9
Angiosperm	72	234	315	53	4	2	372
Monocotyledon	9	54	72	15			87
Dicotyledon	63	180	241	38	4	2	285
Total	81	248	330	53	4	2	389

Table 2. Resource plants in Mt. Woosanbong

Use	E	P	M	S	O	T	F	I	U
No. of taxa	181	160	136	94	77	22	5	4	35
(%)	(46.3)	(40.9)	(34.8)	(24.0)	(19.7)	(5.6)	(1.3)	(1.0)	(9.0)

(edible E, pasturing P, medicinal M, stainable S, ornamental O, timber T, fiber F and industrial I, unknown U).

*sontagiae*, *Ostericum grosseserrata*, and *Androsace umbellata*.

Plants of southern part pattern: 4 taxa of *Polygonatum lasianthum* var. *coreanum*, *Goodyera schlechtendaliana*, *G. macrantha*, and *Purunus sargentii*.

Plants of southern-middle part pattern: 61 taxa of *Dryopteris chinensis*, *Cephalotaxus koreana*, *Juniperus chinensis*, *Bromus remotiflorus*, *Cymbopogon tortilis* var. *goeringii*, *Festuca ovina*, *Oplismenus undulatifolius*, *Spodiopogon cotulifer*, *Trisetum bifidum*, *Sasa borealis*, *Carex okamotoi*, *Arisaema angustatum* var. *peninsulae*, *Tradescantia reflexa*, *Disporum smilacinum*, *Hosta capitata*, *Smilax china*, *Salix glandulosa*, *Platycarya strobilacea*, *Juglans sinensis*, *Carpinus laxiflora*, *Ulmus parvifolia*, *Zelkova serrata*, *Boehmeria spicata*, *Mirabilis jalapa*, *Ranunculus cantoniensis*, *Akebia quinata*, *Brassica campestris* subsp. *napus* var. *nippo-oleifera*, *Hydrangea serrata* for. *acuminata*, *Chrysosplenium grayanum*, *Ribes fasciculatum* var. *chinense*, *Chaenomeles lagenaria*, *Kerria japonica*, *Potentilla freyniana*, *Purunus yedoensis*, *P. serrulata* var. *spontanea*, *Albizzia julibrissin*, *Ceris chinensis*, *Wistaria floribunda*, *Poncirus trifloia*, *Zanthoxylum piperitum*, *Z. schinifolium*, *Euonymus apnica*, *Acer palmatum*, *Vitis thunbergii* var. *sinuata*, *Viola patrinii*, *Elaeagnus umbellata*, *Lagerstroemia indica*, *Cornus kousa*, *Vaccinium oldhami*, *Diospyros lotus*, *D. kaki*, *Symplocos prunifolia*, *Styrax japonica*,

*Fraxinussieboldiana*, *Callicarpa japonica*, *Clerodendron trichotomum*, *Ajuga decumbens*, *Elsholtzia splendens*, *Scutellaria indica*, *Paederia scandens*, and *Yongiajaponica*.

Plants of northern-middle part pattern: 17 taxa of *Osmundajaponica*, *Phragmitescommunis*, *Carex maackii*, *Convallaria keiskei*, *Alnus hirsuta*, *Alnus hirsuta* for. *glabra* var. *sibirica*, *Betula davurica*, *Quercus serrata*, *Aconitum pusedo-leave* var. *erectum*, *Clematis fusca* var. *violaceae*, *Deutzia coreana*, *Malus baccata*, *Vicia venosa* var. *cuspidata*, *Mosla dianthera*, *Asperula odorata*, *Lonicera harai*, and *Aster pekinensis*.

As a result, flora of this mount consists of 0.5% of Northern part plant, 2% of Middle part plant, 1% of Southern part plant, 15.7% of Southern-middle part plant and 4.8% of Northern-middle part plant. From the viewpoint of plant geography, the vegetation of this mount located at the boundary between middle and southern parts in the Korean Peninsula was coincident with the Korean floristic pattern of Nakai (1935).

#### Remarkable plants in Mt. Woosanbong

Korean endemic plants in this mount were 6 taxa of *Cephalotaxus koreana*, *Carex okamotoi*, *Aconitum pusedo-leave* var. *erectum*, *Clematis trichotoma*, *Forsythia koreana*, and *Weigela subsessilis* (Table 3). Rare and endangered plants were 4 taxa of *Carex okamotoi*, *Iris rossii*, *Poncirus trifloia*, and *Pyrola japonica* (Table 4).

Table 3. Korean endemic plants distributed in Mt. Woosanbong.

Number	Scientific name	Korean name
1	<i>Cephalotaxus koreana</i> Nakai	개비자나무
2	<i>Aconitum pseudolaeve</i> var. <i>erectum</i> Nakai	진벌
3	<i>Clematis trichotoma</i> Nakai	할미밀망
4	<i>Forsythia koreana</i> Nakai	개나리
5	<i>Weigela subsessilis</i> L. H. Bailey	명꽃나무
6	<i>Carex okamotoi</i> Ohwi	지리대사초
