ABSTRACT

This research aims to find an optimal space program and analysis of optimal land of the national model of the scientific and technical information center. And the objective of this study is to contribute to strengthen the need of the building of information center and provide operation programs and vision toward information center which will be established later. We suggested a basic plan of scale and space program for proper space uses and optimal facilities and state-of-the-art equipment of building. Also, we selected alternative land by document study, and suggested optimal land by field works and studies.
