Abstract - This study was carried out in order to catalogue the folk plants of 7 counties and cities of northern region of Chungcheongbuk-do from March to October, 2011. Based on the 626 survey sheets collected from 67 residents at 17 places of 7 counties and were subsequently analysed. The identified folk plants in the northern region of Chungcheongbuk-do consisted of a total 348 taxa; 98 families, 250 genera, 298 species, 5 subspecies, 38 varieties, and 7 forms. The use by its usage were: 223 taxa; edible, 123 taxa; medicinal, 4 taxa; dye, 2 taxa; aroma, 6 taxa; spice, 32 taxa; ornamental, 11 taxa; oil, 4 taxa; starch, 22 taxa; and others, respectively, so the edible use is the highest. The most useful part was the leaf, followed by fruit and root. The consistency comparison between the scientific and the local name were the highest in the 50's and the lowest in 80's.

Key words - Northern region of Chungcheongbuk-do, Folk plants, Scientific and local name

Introduction

Traditional knowledge was defined as refers to the knowledge, innovations and practices of indigenous and local communities around the world. Developed from experience gained over the centuries and adapted to the local culture and environment, traditional knowledge is transmitted orally from generation to generation. It tends to be collectively owned and takes the form of stories, songs, folklore, proverbs, cultural values, beliefs, rituals, community laws, local language, and agricultural practices, including the development of plant species and animal breeds. Traditional knowledge is mainly of a practical nature, particularly in such fields as agriculture, fisheries, health, horticulture, and forestry (Convention on Biological Diversity, 2012).

The parties to the Convention set a 2010 target to negotiate an international legally-binding regime on access and benefit sharing (ABS) at the 8th Meeting of the Conference of Parties (COP-8) on 20-31 March 2006 in Curitiba, Brazil. The ABS negotiations will address inter-governmental obligations related to genetic resources, and these will involve measures related

to the rights of indigenous and local communities to control access to and derive benefits from the use of genetic resources and associated traditional knowledge(Talaa et al., 2012).

The aim of this study is to record and conserve traditional knowledge that has been transmitted orally about native folk plants from the aborigines in the northern region Chungcheongbuk- do Province in Korea.

Materials and Methods

Study area

The Chungcheongbuk-do Province can be geographically divided into two regions which share in common the Geumgang River as its border, the northern region and the southern region. The northern region is consisted of high mountains such as Mt. Worak National Park and Mt. Sobaek National Park. Chungcheongbuk-do is located between 37° 15' 20" and 36° 00' 35N; 128° 38' 15" and 127° 16' 40"E, respectively. The administrative district is composed of 7 cities and counties in the northern region. The total area accumulate up to 7433.3 km² and the total population in 2012 was 1,561,493 (Chungcheongbuk-do, 2012). This region's vegetation belongs to the deciduous broadleaf tree forest zone

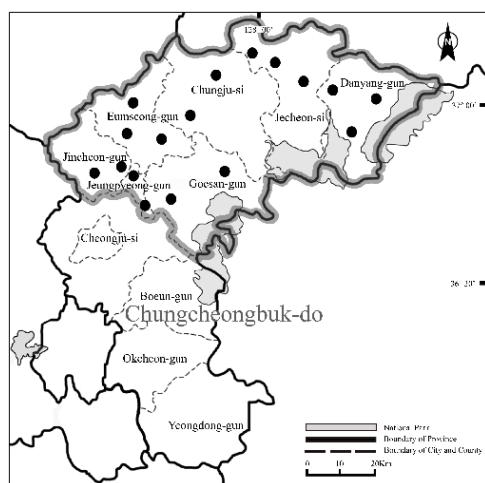

Fig. 1. Investigation sites of 7 cities and counties northern region of Chungcheongbuk-do (●: investigated region).

with four distinct seasons (Walter, 1975, Fig. 1, Table 1).

Data collection

The interviews were conducted in 17 sites of 7 cities and counties from March to October, 2011. Those interview sites were selected where living old peoples and held a traditional

market. We interviewed 67 informants who have lived over 50 years near the investigation area. The key informants were local experts on traditional medicine. They have hardly been affected by modern culture and education. Scientific names of plants were confirmed with the Standard botanical name (Korean Fern Society, 2005; Korean National Arboretum and The Plant Taxonomic Society of Korea, 2007).

Results and Discussion

General analysis of the data

The ethnobotanical knowledge of the informants included 98 families, 250 genera, 348 taxa based on the 626 field survey notes. The identified folk plants were of totally 348 taxa, composed of 2 Pteridophyta taxa, 6 Gymnospermae taxa, 290 Dicotyledons taxa, 50 Monocotyledons taxa, respectively (Table 2). The use by its usage was: 348 taxa; edible, 68 taxa; medicinal, 2 taxa; dye, 1 taxa; aroma, 4 taxa; spice, 1, taxa; ornamental, 3 taxa; oil, 1 taxa; starch, 18 taxa; others respectively, so the edible use is the highest. While, southern region of Chungcheongbuk-do, consisted of a total

173 taxa; 56 families, 129 genera, 150 species, 1 subspecies, 22 varieties. The use by its usage was: 349 taxa; edible, 68 taxa; medicinal, 2 taxa; dye, 1 taxa; aroma, 4 taxa; spice, 1, taxa; ornamental, 3 taxa; oil, 1 taxa; starch, 18 taxa; others respectively, so the edible use is the highest. The number of folk plants investigated each county and city are Eumseong-gun 137, Jecheon-si 106, Chungju-si 91, Jincheon-gun 68, Danyang-gun 58, Jeungpyeong-gun 52, Goesan-gun 24, respectively (Table 3). The most widely used folk plants are Compositae (48 taxa); Liliaceae (26 taxa)a Rasaceae (24 taxa) and Leguminosae (17 taxa).

Coincidence of standard botanical name and local name

Based on the survey results, Coincidence between standard botanical name (Korean National Arboretum and The Plant Taxonomic Society of Korea, 2007) and local name of informants were 50th of 57.1%, 60th of 56.7%, 70th of 37.8% and 80th 22.2%. Among them, 50th showed the highest and 80th showed the lowest coincidence, respectively.

Regional coincidence between standard botanical name

and local name of informants were in order Goesan-gun, Jincheon-gun and Eumseong-gun (Table 4).

In the ethnobotanical research, local name is very important factor for understanding original herbal medicine and folk plant. Therefore, it is urgent to collect local botanical names. For example, *Ixeridium dentatum* (Thunb. ex Mori) Tzvelev, standard name is Sseum-ba-gui, have been cold as Sseum-ba-gu (Goesan-gun and Jeungpyeong-gun), Sa-ku-ri (Danyang-gun), Kal-sok-sai, Kal-sok-soi, Sseun-ba-gui (Jecheon-si) and Ssin-naing-i (Jeungpyeong-gun).

The used of folk plants in northern region of Chungcheongbuk-do

Each Use

Based on the survey from northern region of Chungcheongbuk-do, the used of folk plants were edible 223 taxa, medicinal 123 taxa, dye 4 taxa, aroma 2 taxa, spice 6 taxa, ornamental 32 taxa, oil 11 taxa, starch 4 taxa, others 22 taxa, respectively. Edible and medicinal folk plants ranked first and second (Table 5). Extracted oil from flower of *Rosa*

Table 4. The consistency comparison between the standard name and local name according to counties and cities

Region	JC1	DY	CJ	ES	GS	JC2	JP

rugosa had been used for cooking oil and natural perfume. Extracted starch from dried root of *Calystegia sepium* var. *japonicum* had been used for making Ddeok (Korean cake). *Tanacetum cinerariifolium* (Trev.) Sch.Bip. and *Melia azedarach* L. had been used for an anthelmintic medicine. Among the interesting words from these investigations, Cheon-nyeon-gul-pi means that tile a roof with bark of *Platycarya strobilacea* Siebold & Zucc is stronger than traditional stone roof tile. Even though several traditional knowledges were collected from northern area of Chungcheongbuk-do such as *Rosa rugosa* and *Melia azedarach* L. those were perhaps other region's knowledge. Because of those plants are not native plants in this area.

Used part

Based on the survey from northern region of Chungcheongbuk-do, the used of folk plant parts were whole plants 57 taxa, root 59 taxa, stem 34 taxa, leaf 143 taxa, flower 25 taxa, fruit 61 taxa, seed 13 taxa, bark 6 taxa, timber 6 taxa, other 1 taxon, most used parts were in the order of leaves, fruit, and root (Table 6).

Collect season

Based on the interview results, collect season of folk plant were spring (March to May) 213 kinds, summer (June-August) 567 kinds, autumn (September to November) 103 kinds, winter (December-February) 8 kinds, mostly collected spring and summer. The reasons why collected each season were young plant for edible and make dried vegetable for take during winter at spring. Summer and autumn were collect fruits and bark was used during winter.

Information acquisition process

Folk plants in northern region of Chungcheongbuk-do surveyed by the survey respondents' information acquisition process for orally transmitted 343 cases, own experience 1 case, old documents and books 1 case, and acquiring newspapers from broadcasting 3 cases showed, and investigated mainly to be learned from the elders.

Acknowledgement

This study was supported by Korea National Arboretum 'Chungcheongbuk-do inland areas of traditional (folk) plant surveys and collect' project in 2011.

<i>Aegopodium podagraria</i> L. 산미나리	Leaf, Stem	DY; 돌매나리(Ed), ES; 돌미나리(Ed), JP; 돌미나리(Ed), JC2; 돌미나리(Ed), CJ; 돌미나리(Ed)
<i>Angelica decursiva</i> (Miq.) Franch. & Sav. 바다나물	All, Leaf	DY; (Me), CJ; (Ed)
<i>Angelica gigas</i> Nakai 참당귀	Leaf, Root	CJ; (Me, Ed)
<i>Cnidium officinale</i> Makino 천궁	Fruit, Stem, Root	DY; (Oi, Ed), JC1; (Me, Ot)
<i>Coriandrum sativum</i> L. 고수	All	CJ; (Ed)
<i>Daucus carota</i> subsp. <i>sativa</i> (Hoffm.) Arcang. 당근	Root	GS; (Ed)
<i>Glehnia littoralis</i> F.Schmidt ex Miq. 갯방풍	Leaf	JC2; 방풍나물(Ed)
<i>Oenanthe javanica</i> (Blume) DC. 미나리	All, Leaf, Stem	GS; (Ed), DY; 매나리, 미나지(Ed), ES; (Ed), JP; 매나리(Ed), JC2; (Ed), CJ; 매나리(Ed)
<i>Peucedanum japonicum</i> Thunb. 갯기름나물	Leaf, Stem	DY; (Ed), CJ; 미나리아재비(Ed)
<i>Peucedanum terebinthaceum</i> (Fisch.) Fisch. ex DC. 기름나물	Leaf, Stem, Root	CJ; 지름나물(Me, Ed)
<i>Pimpinella brachycarpa</i> (Kom.) Nakai 참나물	Leaf, Stem	GS; (Ed), DY; (Ed), CJ; (Ed)
Cornaceae 층층나무과		
<i>Cornus kousa</i> F. Buerger ex Miq. 산딸나무	Leaf, Flower, Fruit	JC1; 박달나무(Me, Ed)
<i>Cornus officinalis</i> Siebold & Zucc. 산수유	Leaf, Fruit	ES; (Me), JC1; 산수유나무(Ed), JC2; (Me)
Ericaceae 진달래과		
<i>Rhododendron mucronulatum</i> Turcz. 진달래	Flower	ES; (Ed)
<i>Rhododendron yedoense</i> f. <i>poukhanense</i> (H.Lév.) Sugim. 산철쭉	All	ES; 철쭉(Or)
Primulaceae 앵초과		
<i>Lysimachia barystachys</i> Bunge 까치수염	All, Root, Leaf	JC1; (Me, Ed)
<i>Prunus tomentosa</i> Thunb. 앵초	Leaf	CJ; 배차나물(Ed)
Ebenaceae 감나무과		
<i>Diospyros kaki</i> Thunb. 감나무	All, Leaf, Fruit, Root, Timber	ES; (Or, Ed)
Oleaceae 물푸레나무과		
<i>Forsythia koreana</i> (Rehder) Nakai 개나리	Flower, Fruit	JC1; (Or)
<i>Fraxinus rhynchophylla</i> Hance 물푸레나무	Stem, Bark, Timber	JC1; (Ot), JC2; (Ot)
Gentianaceae 용담과		
<i>Swertia japonica</i> (Schult.) Makino 쓴풀	Bark	DY; (Ot)
Convolvulaceae 메꽃과		
<i>Calystegia sepium</i> var. <i>japonicum</i> (Choisy) Makino 메꽃	All, Leaf, Root	ES; (Me, Ed, St), JC1; (Ed)
<i>Cuscuta japonica</i> Choisy 새삼	Fruit, Seed	JC1; (Me)
<i>Ipomoea batatas</i> (L.) Lam. 고구마	Stem, Root, Leaf	GS; (Ed)
<i>Pharbitis nil</i> (L.) Choisy 나팔꽃	Flower, Seed	ES; (Or, Me), JC2; (Or, Me)
Boraginaceae 지치과		
<i>Sympetrum officinale</i> L. 컴프리	All	JC1; 감부리(Ed)
<i>Trigonotis peduncularis</i> (Trevir.) Benth. ex Hemsl. 꽃마리	Leaf	CJ; 깨나물(Ed)
<i>Trigonotis radicans</i> var. <i>sericea</i> (Maxim.) H.Hara 참꽃마리	Leaf	CJ; 가지나물(Ed)
Labiatae 꿀풀과		
<i>Elsholtzia ciliata</i> (Thunb.) Hyl. 향유	Leaf	DY; (Ed)

Appendix 1. Continued

Scientific name and common name	Useful part	Local name and usefulness
<i>Leonurus japonicus</i> Houtt. 익모초	All, Leaf, Stem, Flower	ES; (Me), JC1; (Me, Ed), JC2; (Me)
<i>Meehania urticifolia</i> (Miq.) Makino 벌깨덩굴	Leaf, Stem	JC1; (Me, Ed)
<i>Mosla punctulata</i> (J.F.Gmel.) Nakai 들깨풀	Leaf, Root	DY; (Me, Ed)
<i>Perilla frutescens</i> var. <i>acuta</i> Kudô 소엽	All, Leaf, Stem, Seed	DY; 차조기(Or, Me), JC1; 차즈시(Me, Ed)
<i>Perilla frutescens</i> var. <i>japonica</i> (Hassk.) Hara 들깨	Leaf, Seed, Fruit, Root	GS; (Oi, Ed), DY; (Me, Ed), JC1; (Oi, Ed), CJ; (Ed)
<i>Prunella vulgaris</i> var. <i>lilacina</i> Nakai 꿀풀	All, Flower, Fruit, Leaf	JC1; (Ed), JC2; (Me), CJ; 가지복도리(Ed)
<i>Scutellaria baicalensis</i> Georgi 황금	Leaf, Root	JP; (Me, Ed)
Solanaceae 가지과		
<i>Capsicum annuum</i> L. 고추	Fruit, Leaf	GS; (Ed)
<i>Lycium chinense</i> Mill. 구기자나무	Leaf, Fruit, Root	ES; 구구자(Ed), JC1; 구구자(Me, Ed), JC2(Me, Ed)
<i>Lycopersicon esculentum</i> Mill. 토마토	Fruit	GS; (Ed), JC2; (Ed)
<i>Physalis alkekengi</i> var. <i>franchetii</i> (Mast.) Hort. 꽈리	All, Fruit, Seed	ES; (Ed), JC1; (Me), JP; (Me)
<i>Solanum lycratum</i> Thunb. 배풍등	Bark	DY; (Me)
<i>Solanum melongena</i> L. 가지	Fruit	GS; (Ed), JC2; (Ed)
<i>Solanum nigrum</i> L. 까마중	All, Fruit	JC1; (Me)
<i>Solanum tuberosum</i> L. 감자	Root	GS; (Ed)
Scrophulariaceae 현삼과		
<i>Melampyrum roseum</i> Maxim. 꽃며느리밥풀	All, Root	ES; 머느리밥풀(Me), JC1; 머느리풀(Me)
<i>Rehmannia glutinosa</i> (Gaertn.) Libosch. ex Steud. 지황	Root	JC1; (Me)
<i>Veronica persica</i> Poir. 큰개불알풀	All	JC1; 개불꽃(Me)
<i>Veronicastrum sibiricum</i> (L.) Pennell 냉초	Root, Leaf	JP; (Me)
<i>Veronicastrum sibiricum</i> f. <i>albiflora</i> T.Yamaz. 흰냉초	Leaf, Root	JP; 흰털냉초(Me, Ed)
Bignoniaceae 능소화과		
<i>Campsis grandiflora</i> (Thunb.) K.Schum. 능소화	All, Flower, Stem	ES; 능소화(Or)
Pedaliaceae 참깨과		
<i>Sesamum indicum</i> L. 참깨	Seed	JC2; (Oi)
Plantaginaceae 질경이과		
<i>Plantago asiatica</i> L. 질경이	All, Leaf, Stem, Seed	ES; 질경이](Ed), JC1; 질경이](Me, Ed), JC2; 질경이](Ed)
Rubiaceae 꼭두서니과		
<i>Galium verum</i> var. <i>asiaticum</i> Nakai 솔나물	Leaf	CJ; (Ed)
<i>Gardenia jasminoides</i> Ellis 치자나무	Fruit	ES; 치자(Dy)
<i>Rubia akane</i> Nakai 꼭두서니	Root, Leaf	CJ; 신경초(Me)
Caprifoliaceae 인동과		
<i>Lonicera japonica</i> Thunb. 인동	Leaf, Stem, Flower	ES; 인동덩굴(Ed), JC1; 인동초, 인동덩굴(Me, Ed)
<i>Sambucus williamsii</i> var. <i>coreana</i> (Nakai) Nakai 딱총나무	All, Leaf, Stem	DY; (Me, Ed), JC1; 빽빽나무, 빽나무, 오배자(Me, Ed)
<i>Viburnum opulus</i> f. <i>hydrangeoides</i> (Nakai) Hara 불두화	All	JC1; 법동화(Or, Me)
Valerianaceae 마타리과		
<i>Patrinia scabiosaefolia</i> Fisch. ex Trevir. 마타리	Root, Leaf, Stem	JC2; (Me, Ed), CJ; 풀속나물(Ed)
<i>Patrinia villosa</i> (Thunb.) Juss. 뚝갈	Leaf, Root, Seed	DY; (Oi, Ed), CJ; 개감추(Me, Ed)
<i>Valeriana fauriei</i> Briq. 쥐오줌풀	Leaf	JP; 마타리](Ed)
Cucurbitaceae 박과		
<i>Citrullus vulgaris</i> Schrad. 수박	Fruit	JC2; (Ed)
<i>Cucumis melo</i> var. <i>makuwa</i> Makino 참외	Fruit, Other	GS; (Ed)
<i>Cucumis sativus</i> L. 오이	Fruit	GS; (Ed)
<i>Cucurbita moschata</i> Duchesne ex Poir 호박	Leaf, Stem, Fruit	GS; (Ed)
<i>Lagenaria leucantha</i> Rusby 박	Fruit	JC1; 고지박(Ed, Ot)
<i>Luffa cylindrica</i> Roem. 수세미오이	Fruit	JC1; (Ot)
<i>Trichosanthes kirilowii</i> Maxim. 하늘타리	All, Root, Fruit	JC1; 하늘타리](Me)
