Abstract - We investigated traditional knowledge about ethnobotanical uses around national parks in the northern areas of Province Gyeongsangbuk-do, with the focus on the Sobaksan National Park area. Interviews were carried out to 138 residents at 42 places from 7 counties and/or cities, and verified species and usage information were categorized by taxonomic groups, usage, and used parts. The ethnobotanical species of the regions consisted of a total of 277 taxa: 244 species, 3 subspecies, 28 varieties, and 2 forma in 213 genera of 79 families. The significant native plants included one Endangered Species (*Paeonia obovata* Max.) and four endemic species (*Salix hallasanensis* H. Lev., *Aconitum pseudolaeve* Nakai, *Paulownia coreana* Uyeki, and *Cirsium setidens* (Dunn) Nakai, *Sasa coreana* Nakai). About 17 Approved Species for Delivering Overseas designated by Korea Ministry of Environment have been also traditionally valuable in the regions. The main usage of the plants were edible (185 taxa) and medicinal (175 taxa). Leaves were most commonly used parts (109 taxa), followed by stems (73 taxa), fruits (69 taxa), roots (67 taxa), and whorls (57 taxa). The traditional usage of plants were diverse as those useful parts. Leaves, fruits and seeds were used as edible and medicinal; sprouts (young shoots) were mainly used as edible; but roots and flowers were used as medicinal. The study does not only provides examples of traditional uses of native plants, but also facilitates sustainable managements and developments of ethnobotanical knowledge for the contemporary society.

Key words - Endemic species, Ethnobotanical, Korea national park, Traditional knowledge

Introduction

Biological resources have been an important contributor to human society as food, medicines, clothing, and other materials (Laird, 2002; Kunwar and Bussmann, 2008; Lee and Shin, 2009; Chung *et al.*, 2016). Since most biological resources have been used without controls and/or regulations among providing and utilizing countries, sometimes the countries have had trouble figuring out reasonable ways to share benefits from the resources (Kunwar and Bussmann, 2008; Ministry of Environment, 2011). To resolve the problem, at the 10th UN meeting ‘Convention on Biological Diversity’ in 2010, all the members of countries agreed on ABS (Access to Genetic Resources and Benefit Sharing) so

called Nagoya Protocol, which provides a platform for efficient utilization of biological resources and has stimulated research on traditional knowledge on native plants in each county (Choi *et al.*, 2012; Kim *et al.*, 2015).

A traditional knowledge is generally accepted as practical knowledge developed for generations by indigenous people in their own society to adapt to a certain natural, cultural, and local environments (Laird, 2002; Kim *et al.*, 2003; Chung *et al.*, 2016). In South Korea, The Act on the Conservation and Use of Biological Diversity (law) states that a traditional knowledge is ‘Knowledge, technology and practice, etc. of individuals or local communities that has maintained a traditional life style suitable to the conservation of biodiversity and sustainable use of biological resources’. Most indigenous, local people (tribes) have accumulated knowledge on their own native plants; about 10-18% of known vascular

Tel. +82-43-830-8618

plants (about 297,000 taxa) have been used traditionally as food and/or medicines (Kunwar and Bussmann, 2008). In the modern society, most drugs are from natural resources, and pharmaceutical companies in developed countries have made an effort to find novel remedies from natural extracts (nature) (Laird, 2002; Lee and Shin, 2009).

Recently in South Korea, research on ethnobotanical knowledge have been actively conducted especially by national institutes such as Korea National Arboretum, National Institute of Biological Resources, and Rural Development Administration (Chung *et al.*, 2010; Chung *et al.*, 2011a; Chung *et al.*, 2011b; Im *et al.*, 2011; Jeong *et al.*, 2011; Kim *et al.*, 2012; Jeong *et al.*, 2012a; Jeong *et al.*, 2012b; Shin *et al.*, 2012; Son *et al.*, 2012; Shin *et al.*, 2013; Chun and Park, 2014; Jeong *et al.*, 2014; Kim *et al.*, 2015; Park and Chun, 2015; Kim and Kang, 2016). Diverse resources were used to collect ethnobotanical information such as interviews and historical literatures. They surveyed local useful plants and figured out which plant species, which parts, and how to use them for what purposes. Lee *et al.* (2016) revealed traditional knowledge on Jeju Island plants from literatures written in Joseon dynasty (1392-1870 AD), and Chung *et al.* (2016) carried out qualitative analyses on accumulated data of traditional knowledge on vascular plants.

National parks are restricted areas for conservation purposes. There are 22 national parks in South Korea, and the parks exhibits high biological diversity including endemics and endangered species (Choi and Oh, 2009; Jang *et al.*, 2011). In the northern area of Province Gyeongsangbuk-do, it is very mountainous and several national parks are located such as Sobaksan, Woraksan, Songnisan, and Juwangsan national parks because two mountain ranges pass though: Baekdudaegan (the largest mountain range in the Korean Peninsula running north to south) and Taebaek Mountains (Choi and Oh, 2009; Jeong *et al.*, 2009; Jang *et al.*, 2011). The parks house of many native vascular plants, and previous floristic surveys on vascular plants reported more than 800 native vascular plants from the parks (Korea National Park Service, 2007; Choi and Oh, 2009; Jeong *et al.*, 2009; Jang *et al.*, 2011; Jang *et al.*, 2015). In the present study, we surveyed and analyzed botanical traditional knowledge in the northern area of Gyeongsangbuk-do to obtain and characterize

ethnobotanical information, which will provide insight on conservation and utilization of biological and genetic resources.

Methods and Materials

Botanical traditional knowledge were collected in 42 places from seven counties and/or cities adjacent areas of Sobaksan, Woraksan, Songnisan, and Juwangsan national parks in the northern area of Province Gyeongsangbuk-do from 2013 to 2014 (Fig. 1). Interviews with local, indigenous residents were conducted. We also collected information of interviewees such as addresses, genders, and ages; and recorded and dictated their statements on traditional plant usage. If possible, we collected used plants for species identification and verification. Interviews and plant collections were conducted as stated in Chung *et al.* (2011a) and Jeong *et al.* (2012a, b).

For plant species identifications, Lee (1996a, b), Lee (2003), Park (2009), and Korean Fern Society (2005) were used, and a taxonomic system and scientific names followed National Institute of Biological Resources (<http://species.nibr.go.kr/>). Native, cultivated and/or introduced plants were determined by National Institute of Biological Resources (2013) and Park

Fig. 1. Investigation sites.

(2009), respectively. The plants Approved Species for Delivering Overseas were identified based on the ‘Biodiversity Conservation and Use’ law by Ministry of Environment (2016).

Usage purposes were categorized as an edible, medicinal, beauty, dye, fiber, household item, insecticide, oil, ornamental, timber, and others. In addition, used parts were grouped into leaf, stem, root, flower, fruit, seed, whole, sprout (young shoot), and others. Raw data of records and dictations are retained at the National Institute of Biological Resources, and detailed methods of preparing plants are available at the database of National Institute of Biological Resources (<http://species.nibr.go.kr/>).

Results and Discussion

Interviewee Composition

Total of 138 persons (43 males and 95 females) were interviewed with a high percentage of female interviewees (68.8 %) in the study (Table 1). Among interviewees, 121 persons have lived in the Baekdudaegan region (Mt. Sobaeksan-Mt. Woraksan-Mt. Songnisan) Sobaksan national park area. The small number of 17 interviewees participated in the Junwangsan National Park region. 80s (44.2 %) and 70s

(34.1 %) are major interviewees. In average, female interviewees (79.9 years old in average) are four years older than male interviewees (75.7 years old in average). The oldest reviewee was a 95-year-old female, and a 56 years old male is youngest. For urban migrations and civilization, most towns in the surveyed areas have experienced population declines and become ageing societies. Traditional knowledge on native plants have been developed for generations, but there are not many people remaining to practice them due to natural and cultural structure changes in a society.

Ethnobotanical Composition

Around national park areas in the northern area of Gyeongsangbuk-do, traditional knowledge on 277 vascular plant taxa are collected (244 species, 3 subspecies, 28 varieties, and 2 forma in 213 genera of 79 families; Table 2, Appendix 1). Because the surveyed areas included habitats in high altitude exhibiting a great vascular plant diversity, various native plants growing in high mountains have been used: *Oplopanax elatus* (Nakai) Nakai, *Rhododendron brachycarpum* D. Don ex G. Don, *Parasenecio firmus* (Kom.) Y.L.Chen, *Acer tegmentosum* Max. The usage of *Oplopanax elatus*, *Rhododendron brachycarpum*, and *Acer tegmentosum* is revealed for the first time in the study. The species did not

Table 1. Gender and age ratios of respondents for interviews around national parks in northern area of Gyeongsangbuk-do, Korea

Gender	Age							
	50s	60s	70s	80s	90s	Sum	Ave.	Ratio (%)

Total	79	214	247	3	28	2	280	100.0

included in the previous, comprehensive ethnobotanical investigation in the interior region of Gyeongsangbuk-do province (Chung *et al.*, 2010). *Cinnamomum camphora* (L.) J. Presl and *Taxillus yadoriki* (Siebold ex Maxim.) Danser are native to southern part of the Korean peninsula. In the investigated areas, the species should have been obtained as a dried material at traditional markets.

Major diversities of ethnobotanical species in the regions belong to dicotyledons (Table 2). The highest diversity is found in Compositae with 37 taxa; and Rosaceae (25 taxa), Fabaceae (17 taxa), Poaceae (15 taxa), and Liliaceae (15 taxa) follow (Table 3). Previous ethnobotanical studies in South Korea also demonstrate that Compositae has been the most commonly used taxonomic group, which should relate to great diversity of Compositae species in the Korean Peninsula (Chung *et al.*, 2010; Chung *et al.*, 2011a; Chung *et al.*, 2011b; Im *et al.*, 2011; Jeong *et al.*, 2011; Jeong *et al.*, 2012a; Jeong *et al.*, 2012b; Kim *et al.*, 2012; Shin *et al.*, 2012; Son *et al.*, 2012; Shin *et al.*, 2013; Chun and Park, 2014; Jeong *et al.*, 2014; Kim *et al.*, 2015; Park and Chun, 2015; Kim and Kang, 2016). In addition, most commonly used plant groups provide foods such as vegetables, salads, soups, and desserts. The Korean culture of having several vegetables in daily foods have also increased consumption of wild and native plants.

In the investigation, 79 cultivated and/or planted taxa are included (Appendix 1). Various cultivated species with a long history have been grown and naturalized in the Korean

peninsula for diverse usage. Most cultivated species are edible (58 taxa), which includes daily foods for main and side dishes as well as seasoning such as *Oryza sativa* L., *Raphanus sativus* L., and *Allium scorodoprasum* var. *viviparum* Regel. It is far from understanding when and where initially the species became cultivated and introduced to Korea. Ethnobotanical and biological investigations on cultivated species are desired to foster cultivated plant usage in the World.

Important Ethnobotanical Species

The surveyed plants include endangered species, endemics, and Approved Species for Delivering Overseas (Table 4). *Paeonia obovata* Max., an endangered species degree II, has been collected for a medicinal usage; and Korean Endemics have been also used (*Salix hallasanensis* H. Lev., *Aconitum pseudolaeve* Nakai, *Paulownia coreana* Uyeki, *Cirsium setidens* (Dunn) Nakai, *Sasa coreana* Nakai). Furthermore, about 17 Approved Species for Delivering Overseas such as *Codonopsis pilosula* (Franch.) Nannf. and *Cirsium setidens* (Dunn) Nakai have been consumed without any regulations (Table 4).

About 543 endangered vascular plants (about 7% of Korean vascular plants) are designated by Korea Ministry of Environment (Kim *et al.*, 2008; National Institute of Biological Resources, 2012), and 979 vascular plants are in the list of Approved Species for Delivering Overseas (Ministry of Environment, 2016). Because most endangered plants have long been used by local people without any

Table 3. The family composition of ethnobotanical species around national parks in northern areas of Gyeongsangbuk-do, Korea

Family name	No. of taxa	Ratio (%)

awareness of conservation concerns, local residents utilize them as before. However, a biological conservation law in South Korea prohibits collections from natural habitats in national parks. Local, and indigenous people should be informed about regulations that apply to use native plants. Traditionally widely used native plants have high potentials to contribute to human well-being in the contemporary society. We need to develop agreeable ways to use native plants to achieve sustainable use of biological resources.

Usage of Ethnobotanical Species

In the surveyed areas, ethnobotanical species are used for various purposes (Table 5). Most common usage is for food (185 taxa), and medicinal use is the second most frequent purpose with 175 taxa. Household items (24 taxa), beauty (8 taxa), fiber (8 taxa), oil (8 taxa) are also main usage.

Table 5. The usage of ethnobotanical species around national parks in northern area of Gyeongsangbuk-do, Korea

Usage	No. of taxa
Edible	185
Medicinal	174
Household items	24
Beauty	8

Timber	6
Insecticide	4
Others	25

Traditionally in Korea, wild plants have been used greatly for vegetables (Chung *et al.*, 2010; Chung *et al.*, 2011a; Chung *et al.*, 2011b; Im *et al.*, 2011; Jeong *et al.*, 2011; Jeong *et al.*,

2012b; Kim *et al.*, 2012; Shin *et al.*, 2012; Son *et al.*, 2012; Shin *et al.*, 2013; Chun and Park, 2014; Jeong *et al.*, 2014; Kim and Kang, 2016). In contrast, native plants have been used for medicines most in Jejudo (the largest island off the coast of the Korean Peninsula) and Ulleung-do (120 km east of the Korean Peninsula) islands (Jeong *et al.*, 2012a; Kim *et al.*, 2015). Ethnobotanical usage are diverse in different areas and also reflecting their natural and artificial environments.

Useful Parts of Ethnobotanical Species

Various parts of vascular plant species are used (Fig. 2). Leaves are most commonly used part in 109 taxa, and stems (73 taxa), fruits (69 taxa), roots (67 taxa), and wholes (57 taxa) are also used in various occasions.

Useful parts of ethnobotanical species are somehow related to purposes (Table 6). Leaves, fruits, and seeds are

used for food or medicines. Shoots are mainly edibles whereas roots and flowers are usually utilized for medicines. Roots are well-known storage organs to have bioactive substances, and they have been used in (Oriental) Herbal Medicine (Chung *et al.*, 2016; Srithi *et al.*, 2009; Teklehaymanot, 2009). Stems are used for medicines, but show great utilization in household items.

The survey of traditional knowledge on vascular plant usage in the national parks and adjacent areas exhibits high correlations with natural and cultural environments. Diverse native vascular plants have provided nutrition, cure, entertainment, and convenience in daily life. In particular, high-mountain growing species such as *Oplopanax elatus*, *Rhododendron brachycarpum*, *Parasenecio firmus*, and *Acer tegmentosum* have been utilized in the areas. They are expected to provide untapped, natural substances for human well-being in the contemporary society. It is good news that there are much information on ethnobotanical knowledge, but the bad news is that those who have the traditional knowledge are decreasing and the knowledge will soon disappear. To practice most traditional knowledge, long-time training and exercises are required thus, it is urgent to obtain and learn traditional knowledge and skills. Most societies are also losing natural resources due to social and environment changes such as urbanization, global warming. The development of native plant conservations and utilizations will make it possible to connect generations from ancient to future in a sustainable society, and biological resources will be appreciated.

Appendix 1. Ethnobotanical inventory around national parks in northern area of Gyeongsangbuk-do, Korea

Scientific and Korean name	Usage ^z	Significance ^y
Pteridophyta 양치식물문		
Equisetaceae 속새과		
<i>Equisetum hyemale</i> L. 속새	Ed	
Osmundaceae 고비과		
<i>Osmunda japonica</i> Thunb. 고비	Ed	
Aspleniaceae 잔고사리과		
<i>Pteridium aquilinum</i> var. <i>latiusculum</i> (Desv.) Underw. ex A.Heller 고사리	Ed	
Gymnospermae 나자식물문		
Ginkgoaceae 은행나무과		
<i>Ginkgo biloba</i> L. 은행나무	Ed, Ho, Me	Cul
Pinaceae 소나무과		
<i>Abies holophylla</i> Max. 전나무	Me	
<i>Larix kaempferi</i> (Lamb.) Carriere 일본잎갈나무	Fi	Cul
<i>Pinus densiflora</i> S. et Z. 소나무	Ed, Ho, Me, Oi, Ti	
<i>Pinus koraiensis</i> Siebold & Zucc. 잣나무	Ed	
Cupressaceae 측백나무과		
<i>Juniperus rigida</i> Siebold & Zucc. 노간주나무	Ho	
Angiospermae 피자식물문		
Dicotyledoneae 쌍자엽식물아강		
Chloranthaceae 홀아비꽃대과		
<i>Chloranthus japonicus</i> Siebold 홀아비꽃대	Ed	
Salicaceae 벼드나무과		
<i>Populus deltoides</i> Marsh. 미류나무	Ho	
<i>Salix babylonica</i> L. 수양버들	Me	
<i>Salix gracilistyla</i> Miq. 갯버들	Ed	
<i>Salix halliana</i> H.Lev. 떡버들	Me	Ap, En
<i>Salix koreensis</i> Andersson 벼드나무	Ed, Ho, Me, Ot	
Juglandaceae 가래나무과		
<i>Juglans mandshurica</i> Maxim. 가래나무	Ed, Ot	
<i>Juglans regia</i> L. 호두나무	Ed, Me, Ot	Cul
Betulaceae 자작나무과		
<i>Betula platyphylla</i> var. <i>japonica</i> (Miq.) H. Hara 자작나무	Me	
<i>Betula schmidtii</i> Regel 박달나무	Ho, Ti	
<i>Corylus heterophylla</i> Fisch. ex Trautv. 개암나무	Ed	
Fagaceae 참나무과		
<i>Castanea crenata</i> S. et Z. 밤나무	Ed, Me	
<i>Castanea crenata</i> var. <i>kusakuri</i> (Blume) Nakai 산밤나무	Ed	
<i>Quercus acutissima</i> Carruth. 상수리나무	Ed	
<i>Quercus aliena</i> Bl. 갈참나무	Ed, Ho, Ot, Ti	
<i>Quercus serrata</i> Thunb. 졸참나무	Me	
Ulmaceae 느릅나무과		
<i>Ulmus davidiana</i> var. <i>japonica</i> (Rehder) Nakai 느릅나무	Dy, Ed, Me, Ot	
<i>Zelkova serrata</i> (Thunb.) Makino 느티나무	Me, Ti	

^zUsage: Be (Beauty), Dy (Dye), Ed (Edible), Fi (Fiber), Ho (Household items), In (Insecticide), Me (Medicinal), Oi (Oil), Or (Ornamental), Ti (Timber).^ySignificance: Ap (Approved species for delivering overseas), Cul (Cultivated and/or planted), En (Endemic species), Ke (Korean endangered species designated by Ministry of Environment).

Appendix 1. Continued

Scientific and Korean name	Usage ^z	Significance ^y
Moraceae 뽕나무과		
<i>Cudrania tricuspidata</i> (Carr.) Bureau ex Lavallee 꼬지뽕나무	Ed, Me	
<i>Morus alba</i> L. 뽕나무	Ed, Me, Ot	
<i>Morus bombycina</i> Koidz. 산뽕나무	Me, Ot	
<i>Broussonetia kazinoki</i> Siebold 닥나무	Ed, Ho, Me	
Cannabaceae 삼과		
<i>Cannabis sativa</i> L. 삼	Ed, Fi, Me, Ot	Cul
Urticaceae 쐐기풀과		
<i>Boehmeria nivea</i> (L.) Gaudich. 모시풀	Ed, Fi	
Loranthaceae 겨우살이과		
<i>Taxillus yadoriki</i> (Siebold ex Maxim.) Danser 참나무겨우살이	Me	Ap
<i>Viscum album</i> var. <i>coloratum</i> (Kom.) Ohwi 겨우살이	Me	
Polygonaceae 마디풀과		
<i>Fagopyrum esculentum</i> Moench 매밀	Ed, Me	Cul
<i>Fallopia japonica</i> (Houtt.) Ronse Decr. 호장근	Me	
<i>Fallopia multiflora</i> (Thunb.) Haraldson 허수오	Me	
<i>Persicaria hydropiper</i> (L.) Spach 여뀌	Ot	
<i>Persicaria tinctoria</i> H. Gross 쪽	Fi	
Chenopodiaceae 명아주과		
<i>Chenopodium album</i> var. <i>centrorubrum</i> Makino 명아주	Ed	
<i>Kochia scoparia</i> (L.) Schrad. 덤싸리	Ho, Me	
<i>Spinacia oleracea</i> L. 시금치	Ed	Cul
Amaranthaceae 비름과		
<i>Achyranthes japonica</i> (Miq.) Nakai 쇠무릎	Me	
<i>Amaranthus mangostanus</i> L. 비름	Ed	
<i>Celosia cristata</i> L. 맨드라미	Ed	Cul
Nyctaginaceae 분꽃과		
<i>Mirabilis jalapa</i> L. 분꽃	Be	Cul
Portulacaceae 쇠비름과		
<i>Portulaca oleracea</i> L. 쇠비름	Ed, Me	
Caryophyllaceae 석죽과		
<i>Arearia serpyllifolia</i> L. 벼룩이자리	Ed	
<i>Silene firma</i> Siebold & Zucc. 장구채	Me	
<i>Stellaria alsine</i> var. <i>undulata</i> Ohwi 벼룩나물	Ed	
Ranunculaceae 미나리아재비과		
<i>Aconitum ciliare</i> DC. 놋젓가락나물	Ed, Me, Ot	
<i>Aconitum pseudolaeve</i> Nakai 진범	Ot	Ap, En
<i>Caltha palustris</i> L. 동의나물	Ed	
<i>Pulsatilla koreana</i> (Yabe ex Nakai) Nakai ex Nakai 할미꽃	Ed, In, Me	
<i>Thalictrum filamentosum</i> var. <i>tenerum</i> (Huth) Ohwi 산꿩의다리	Ed	
Paeoniaceae 작약과		
<i>Paeonia lactiflora</i> Pall. 작약	Me	
<i>Paeonia obovata</i> Max. 산작약	Me	Ke
<i>Paeonia suffruticosa</i> Andrews 모란	Ed	Cul

^zUsage: Be (Beauty), Dy (Dye), Ed (Edible), Fi (Fiber), Ho (Household items), In (Insecticide), Me (Medicinal), Oi (Oil), Or (Ornamental), Ti (Timber).^ySignificance: Ap (Approved species for delivering overseas), Cul (Cultivated and/or planted), En (Endemic species), Ke (Korean endangered species designated by Ministry of Environment).

Appendix 1. Continued

Scientific and Korean name	Usage ^z	Significance ^y
Lardizabalaceae 으름덩굴과		
<i>Akebia quinata</i> (Houtt.) Decne. 으름	Ed, Me	
Berberidaceae 매자나무과		
<i>Epimedium koreanum</i> Nakai 삼지구엽초	Me	Ap
Schisandraceae 오미자과		
<i>Schisandra chinensis</i> (Turcz.) Baill. 오미자	Ed, Me	
Lauraceae 녹나무과		
<i>Cinnamomum camphora</i> (L.) J.Presl 녹나무	Me	
<i>Lindera obtusiloba</i> Blume 생강나무	Me, Oi	
Papaveraceae 양귀비과		
<i>Papaver somniferum</i> L. 양귀비	Me	Cul
Cruciferae 십자화과		
<i>Brassica rapa</i> var. <i>glabra</i> Regel 배추	Me	Cul
<i>Capsella bursapastoris</i> (L.) Medicus 냉이	Ed	
<i>Draba nemorosa</i> L. 꽃다지	Ed	
<i>Erysimum amurense</i> Kitag. 부지깽이나물	Ed	
<i>Raphanus sativus</i> L. 무	Ed, Me	Cul
Crassulaceae 돌나물과		
<i>Orostachys japonica</i> (Maxim.) A.Berger 바위솔	Me	
<i>Sedum sarmentosum</i> Bunge 돌나물	Ed	
Eucommiaceae 두총과		
<i>Eucommia ulmoides</i> Oliver 두총	Me	Cul
Rosaceae 장미과		
<i>Aruncus dioicus</i> var. <i>kamtschaticus</i> (Maxim.) H.Hara 눈개승마	Ed	
<i>Chaenomeles sinensis</i> (Thouin) Koehne 모과나무	Ed, Me	Cul
<i>Crataegus pinnatifida</i> Bunge 산사나무	Ed	
<i>Duchesnea indica</i> (Andr.) Focke 범딸기	Ed, Me	
<i>Malus pumila</i> Mill. 사과나무	Ed, Me	Cul
<i>Malus sieboldii</i> (Regel) Rehder 아그배나무	Ed	
<i>Prunus armeniaca</i> var. <i>ansu</i> Max. 살구나무	Ed	Cul
<i>Prunus davidiana</i> (Carriere) Franch. 산복사나무	Me	
<i>Prunus mume</i> (Siebold) Siebold & Zucc. 매실나무	Ed, Me	Cul
<i>Prunus persica</i> (L.) Batsch 복사나무	Ed, Me	Cul
<i>Prunus salicina</i> Lindl. 자두나무	Ed	Cul
<i>Prunus tomentosa</i> Thunb. 앵도나무	Ed	Cul
<i>Pyrus pyrifolia</i> (Burm.f.) Nakai 돌배나무	Ed, Me	
<i>Pyrus pyrifolia</i> var. <i>culta</i> Nak. 배나무	Me	Cul
<i>Rosa multiflora</i> Thunb. 찔레꽃	Ed, Me	
<i>Rubus coreanus</i> Miq. 복분자딸기	Ed	
<i>Rubus corchorifolius</i> L. fil. 수리딸기	Ed	
<i>Rubus crataegifolius</i> Bunge 산딸기	Ed, Me	
<i>Rubus idaeus</i> var. <i>microphyllus</i> Turcz. 명덕딸기	Ed	
<i>Rubus matsumuranus</i> var. <i>concolor</i> (Kom.) Kitag. 나무딸기	Ed, Me	
<i>Rubus oldhamii</i> Miq. 줄딸기	Ed	

^zUsage: Be (Beauty), Dy (Dye), Ed (Edible), Fi (Fiber), Ho (Household items), In (Insecticide), Me (Medicinal), Oi (Oil), Or (Ornamental), Ti (Timber).^ySignificance: Ap (Approved species for delivering overseas), Cul (Cultivated and/or planted), En (Endemic species), Ke (Korean endangered species designated by Ministry of Environment).

Appendix 1. Continued

Scientific and Korean name	Usage ^z	Significance ^y
<i>Rubus parvifolius</i> L. 명석딸기	Ed, Me	
<i>Sanguisorba officinalis</i> L. 오이풀	Me	
<i>Sorbus alnifolia</i> (Siebold & Zucc.) C.Koch 팥배나무	Ed	
<i>Stephanandra incisa</i> (Thunb.) Zabel 국수나무	Ed	
Fabaceae 콩과		
<i>Albizia julibrissin</i> Durazz. 자귀나무	Me	
<i>Astragalus mongolicus</i> Bunge 황기	Ed, Me	Cul
<i>Caragana sinica</i> (Buc'hoz) Rehder 골담초	Me	
<i>Cercis chinensis</i> Bunge 박태기나무	Ot	Cul
<i>Glycine max</i> (L.) Merr. 콩	Be, Ed, Me, Ot	Cul
<i>Glycine soja</i> Siebold & Zucc. 돌콩	Me	Ap
<i>Glycyrrhiza uralensis</i> Fisch. 감초	Me	Cul
<i>Indigofera kirilowii</i> Maxim. ex Palib. 땅비싸리	Ed	
<i>Lespedeza bicolor</i> Turcz. 싸리	Ed, Ho, Me	
<i>Lespedeza x schindleri</i> T.B.Lee 잡싸리	Me	
<i>Phaseolus angularis</i> (Willd.) Ohwi & H.Ohashi 팥	Ed	Cul
<i>Phaseolus vulgaris</i> var. <i>humilis</i> Alef. 강낭콩	Ed	Cul
<i>Pisum sativum</i> L. 완두	Ed	Cul
<i>Pueraria lobata</i> (Willd.) Ohwi 쥐	Ed, Me	
<i>Sophora flavescens</i> Solander ex Aiton 고삼	Me, Ot	
<i>Vigna radiata</i> (L.) Wilczek 녹두	Ed, Me	Cul
<i>Vigna unguiculata</i> (L.) Walp. 동부	Ed	Cul
Geraniaceae 쥐손이풀과		
<i>Geranium thunbergii</i> Siebold & Zucc. 이질풀	Me	
Balsaminaceae 봉선화과		
<i>Impatiens balsamina</i> L. 봉선화	Be, Ot	Cul
<i>Impatiens textori</i> Miq. 물봉선	Me	
Euphorbiaceae 대극과		
<i>Ricinus communis</i> L. 피마자	Ed, Me, Oi	Cul
<i>Securinega suffruticosa</i> (Pall.) Rehder 광대싸리	Ed	
Rutaceae 운향과		
<i>Phellodendron amurense</i> Rupr. 황벽나무	Me	
<i>Poncirus trifoliata</i> Rafin. 행자나무	Ed, Me	Cul
<i>Zanthoxylum piperitum</i> (L.) DC. 초피나무	Be, Ed, Me, Ot	
<i>Zanthoxylum schinifolium</i> S. et Z. 산초나무	Ed, Me, Oi	
Simaroubaceae 소태나무과		
<i>Picrasma quassoides</i> (D. Don) Benn. 소태나무	Me, Oi	
Meliaceae 멀구슬나무과		
<i>Cedrela sinensis</i> A. Juss. 참죽나무	Ed, Me	Cul
Celastraceae 노박덩굴과		
<i>Euonymus alatus</i> (Thunb.) Siebold 화살나무	Ed, Me	
Staphyleaceae 고추나무과		
<i>Staphylea bumalda</i> Dc. 고추나무	Ed	

^zUsage: Be (Beauty), Dy (Dye), Ed (Edible), Fi (Fiber), Ho (Household items), In (Insecticide), Me (Medicinal), Oi (Oil), Or (Ornamental), Ti (Timber).^ySignificance: Ap (Approved species for delivering overseas), Cul (Cultivated and/or planted), En (Endemic species), Ke (Korean endangered species designated by Ministry of Environment).

Appendix 1. Continued

Scientific and Korean name	Usage ^z	Significance ^y
Anacardiaceae 웃나무과		
<i>Rhus javanica</i> L. 불나무	Me	
<i>Rhus verniciflua</i> Stokes 웃나무	Ed, Me	
Aceraceae 단풍나무과		
<i>Acer pictum</i> subsp. <i>mono</i> (Maxim.) Ohashi 고로쇠나무	Ed	
<i>Acer tataricum</i> subsp. <i>ginnala</i> (Maxim.) Wesm. 신나무	Dy, Fi	
<i>Acer tegmentosum</i> Max. 산겨름나무	Me	Ap
Rhamnaceae 갈매나무과		
<i>Hovenia dulcis</i> Thunb. 헛개나무	Me	Ap
<i>Zizyphus jujuba</i> var. <i>inermis</i> (Bunge) Rehder 대추나무	Ed, Me	Cul
Vitaceae 포도과		
<i>Ampelopsis brevipedunculata</i> (Maxim.) Trautv. 개머루	Me	
<i>Vitis coignetiae</i> Pulliat ex Planch. 머루	Ed	
<i>Vitis vinifera</i> L.. 포도	Ed	Cul
Malvaceae 아욱과		
<i>Althaea rosea</i> Cav. 접시꽃	Me	Cul
<i>Gossypium indicum</i> Lam. 목화	Ed, Fi, Oi	Cul
<i>Malva verticillata</i> L.. 아욱	Ed	Cul
Actinidiaceae 다래나무과		
<i>Actinidia arguta</i> (Siebold & Zucc.) Planch. ex Miq. 다래	Ed, Ho	
Theaceae 차나무과		
<i>Camellia japonica</i> L. 동백나무	Ed, Oi	
Violaceae 제비꽃과		
<i>Viola acuminata</i> Ledeb. 졸방제비꽃	Ed	
Cucurbitaceae 박과		
<i>Citrullus vulgaris</i> Schrad. 수박	Ed	Cul
<i>Cucumis sativus</i> L. 오이	Ed, Me	Cul
<i>Cucurbita moschata</i> Duchesne 호박	Ed, Me	Cul
<i>Lagenaria leucantha</i> Rusby 박	Ed, Ho, Me	Cul
<i>Luffa cylindrica</i> Roem. 수세미오이	Ho, Me	Cul
Elaeagnaceae 보리수나무과		
<i>Elaeagnus umbellata</i> Thunb. 보리수나무	Ed, Me	
Punicaceae 석류과		
<i>Punica granatum</i> L. 석류나무	Ed	Cul
Onagraceae 바늘꽃과		
<i>Oenothera biennis</i> L. 달맞이꽃	Ed, Me	
Araliaceae 두릅나무과		
<i>Aralia elata</i> (Miq.) Seemann 두릅나무	Ed, Me	
<i>Eleutherococcus sessiliflorus</i> (Rupr. & Maxim.) S.Y.Hu 오갈피나무	Ed, Me	
<i>Kalopanax septemlobus</i> (Thunb.) Koidz. 음나무	Ed, Me	
<i>Oplopanax elatus</i> (Nakai) Nakai 땃두릅나무	Ed	Ap
<i>Panax ginseng</i> C.A.Mey. 인삼	Ed, Me	Cul
Apiaceae 미나리과		
<i>Angelica dahurica</i> (Fisch. ex Hoffm.) Benth. & Hook.f. ex Franch. & Sav. 구릿대	Me	

^zUsage: Be (Beauty), Dy (Dye), Ed (Edible), Fi (Fiber), Ho (Household items), In (Insecticide), Me (Medicinal), Oi (Oil), Or (Ornamental), Ti (Timber).^ySignificance: Ap (Approved species for delivering overseas), Cul (Cultivated and/or planted), En (Endemic species), Ke (Korean endangered species designated by Ministry of Environment).
